An “imaginary” number is introduced, called  $i$  (for imaginary), which is declared to be a solution of the polynomial equation  $x^2 + 1 = 0$ . The field of complex numbers is denoted by  $\mathbb{C}$ . We have  $\mathbb{C} = \{x + iy : x, y \in \mathbb{R}\}$ . For  $z = x + iy$ , we also write  $\operatorname{Re}(z)$  to denote the real part of  $z$ , namely the real number  $x$ . Also  $\operatorname{Im}(z) = y$  is the imaginary part of  $z$ . Let  $z_1 = x_1 + iy_1$  and  $z_2 = x_2 + iy_2$  be complex numbers. Then

Complex Analysis. Serge Lang.  
Now in its fourth edition, the  
first part of this book is devoted  
to the basic material of complex  
analysis, while the second covers  
many special topics, such as the  
Riemann Mapping Theorem, the  
gamma function, and analytic  
continuation. Power series  
methods are used more  
systematically than is found in  
other texts, and the resulting  
proofs often shed more light on  
the results than the standard  
proofs.

All the exercises plus their  
solutions for Serge Lang's  
fourth edition of "Complex  
Analysis," ISBN  
0-387-98592-1. The  
problems in the first 8  
chapters are suitable for an  
introductory course at  
undergraduate level and  
cover power series, Cauchy's  
theorem, Laurent series,  
singularities and  
meromorphic functions, the  
calculus of residues,  
conformal mappings, and  
harmonic functions.
