A New Companion to Chaucer Springer The extensively revised and expanded version of the acclaimed Companion to Chaucer An essential text for both established scholars and those seeking to expand their knowledge of Chaucer studies, A New Companion to Chaucer is an authoritative and

up-to-date survey of Chaucer scholarship. Rigorous yet accessible, this book helps readers to identify current debates, recognize historical and literary context, and to understand how particular concepts and theories affect the interpretation of Chaucer ' s texts. Chaucer specialists from around the globe offer contributions that range from updates of long-standing scholarship on biography, language, women, and social structures, to original research in new areas such as ideology, the afterlife, patronage,

and sexuality. In presenting conflicting perspectives and ideological differences, this stimulating volume encourages readers to explore additional paths of inquiry and engage in lively and informed debate. Each chapter of the Companion, organized by issues and themes, balances textual analysis and cultural context by grounding the reader in existing scholarship. Key issues from specific passages are discussed with an annotated bibliography provided for reference and further reading.

The new edition of this innovative text employs insights from contemporary linguistic theories but builds them into a practical and coherent system that stays firmly rooted within traditional models. Its down-to-earth explanations about how language works are illustrated at every step with diagrams and other visual models. The examples and exercises consist of

provocative and intelligent sentences, not desiccated grammar-book examples. Each chapter includes a sentence-analysis exercise with fifty problems. Answers are provided for ten sentences per chapter. A new chapter on how grammar functions in literature and how it is used to improve writing extends the applications of Doing Grammar in this second edition, which also includes new introductory chapter outlines and thoroughly revised chapter

summaries. The new edition was class tested for over a year. Every page has been rethought and redefined to make grammatical analysis clear, understandable, useful, and interesting. It will be an invaluable guide for students in introductory and advanced grammar and composition courses and for all readers seeking to discover how language works. The Gram-positive and spore-forming Bacilli are the most dominant group of bacteria that exist in various ecological niches on the earth. They represent one of the most important unmapped pools of biodiversity with immense potential of applications in agriculture, environment, and industry. As these bacteria are highly tolerant to stressful environment and enhance plant tolerance to harsh environment such as salinity, drought, and heavy metal toxicity, plant-associated Bacilli have high potential for promoting sustainable crop production. Many

species of Bacilli are being commercially used as phytostimulator and biofertilizer. Some of them are applied as biopesticide for protecting crop plants from phytopathogens and insect pests. The Bacillus-based products are becoming popular in ecologically sound and climate resilient agricultural production system. In fact, Bacillus and allied species based formulations are already dominating the biopesticides market, although, to compete with other formulations and chemical alternatives, the biology of Bacillus had to be understood from perspective of such applications. Our understanding of the biology and molecular-basis of the

beneficial effects of plant-associated Bacilli has greatly been progressed in recent years through genomics, metagenomics, post-genomics and metabolomics studies. The volume two of the series Bacilli and Agrobiotechnology comprehensively reviews and updates current knowledge of Bacilli as phytostimulant and biological control of plant pests. Better understanding the biology, ecology and mechanism of action of the beneficial strains of Bacilli will play a role in the development of products to support green biotechnology in agriculture and industries.
