Global mobile satellite communications (GMSC) are specific satellite communication systems for maritime, land and aeronautical applications. It enables connections between moving objects such as ships, vehicles and aircrafts, and telecommunications subscribers through the medium of communications satellites, ground earth stations, PTT or other landline telecommunications providers.

Mobile satellite communications and technology have been in use for over two decades. Its initial application is aimed at

the maritime market for commercial and distress applications. In recent years, new developments and initiatives have resulted in land and aeronautical applications and the introduction of new satellite constellations in non-geostationary orbits such as Little and Big LEO configurations and hybrid satellite constellations as Ellipso Borealis and Concordia system. This book is important for modern shipping, truck, train and aeronautical societies because GMSC in the present millennium provides more effective business and trade, with emphasis on safety and commercial communications. Global Mobile Satellite Communications is written to make bridges between potential readers and current GMSC trends, mobile system concepts and network architecture using a

simple mode of style with understandable technical information, characteristics, graphics, illustrations and mathematics equations. Global Mobile Satellite Communications represents telecommunications technique and technology, which can be useful for all technical staff on vessels at sea and rivers, on all types of land vehicles, on planes, on off shore constructions and for everyone possessing satellite communications handset phones.

technical articles that enthusiasts crave. Satellite Communications Systems and Technology

A young woman is killed in an apparent traffic accident in the mountains outside of the city of Granada, Spain. Her brother, who heads up the Attack on Principle training unit of the U.S. Secret Service, travels to Spain to bring her body back to America. There, and in the company of a female lieutenant in the National Police Force, it is discovered that there may have been foul play associated with his sister Gina's death. Soon, the consequence of this incident generates a cascade of mysterious murders that confounds local authorities and shuts down all leads to why Gina Cerone was killed. Eugene Cerone, after a thirty year career in the Secret Service, retires so that he can participate in the investigation of Gina's

apparent murder. Working with Lieutenant Mercedes Garcia Rico, an attractive, strong willed and competent investigator, the two uncover an unfathomable conspiracy that dates back to the time the Moors surrendered their kingdom in Spain to the Catholic monarchs, Ferdinand and Isabela in 1492. Driven first by the mission to bring the killer of his sister to justice, Cerone is forced to confront a true evil empire, one that could threaten the stability of an allied nation, Europe as well as the security of the United States. Without official sanction from either government, Cerone builds an unlikely support network and investigative team that includes resources from the Secret Service, a Hollywood film studio, the CIA and the Spanish Police Scientific Unit. Innovative behavioral analysis techniques, financial forensics and intelligence systems are used to

link historical events and Arabian fables to crimes and conspiracies of the 21st century. Cerone and Lieutenant Garcia must decipher fact from fable, evidence from whispered rumors and leads from legends, to solve the mystery and stop a silent revolution and convince both Spanish and American authorities, that the conspiracy is real and not fantasy.
