London, UK. This

popular
international
conference from

the Institution of
Mechanical
Engineers

provides a forum
for IC engine
experts looking

closely at
developments for
personal transport

applications,
though many of
the drivers of

change apply to
light and heavy
duty, on and off

highway, transport
and other sectors.
These are exciting

times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architectures and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO2 emissions and the dependence on oil-derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines' applications, followed by chapters on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons.
