This book is about running modern industrial enterprises with the help of information systems. Enterprise resource planning (ERP) is the core of business information processing. An ERP system is the backbone of most companies' information systems landscape. All major business processes are handled with the help of this system. Supply chain management (SCM) looks beyond the individual company, taking into account that enterprises are increasingly concentrating on their core competencies, leaving other activities to suppliers. With the growing dependency on the partners, effective supply chains have become as important for a company's success as efficient in-house processes. This book covers typical business processes and shows how these processes are implemented. Examples are presented using the leading systems on the market – SAP ERP and SAP SCM. In this way, the reader can understand how business processes are actually carried out "in the real world".

This book is dedicated to the great scientist and outstanding individual Nikolay Wladimirovich Timofeeff-Ressovsky. The book brings together a number of brief stories/essays about Timofeeff-Ressovsky including "Stories told by himself", and scientific chapters addressing his major research areas: genetics, radiobiology, radiation ecology and epidemiology, and evolution. Timofeeff-Ressovsky contributed to several fields of biology and established new directions of scientific research. He often repeated the phrase, which would later become famous: "Science should not be approached with the ferocity of wild animals". In keeping with that philosophy, the issues discussed here are still open. Each scientific part starts with a current review; the chapters present leading scientific schools and views. The main theme discussed in the genetics part is mutation variability in the context of linear (replication, transcription, translation) and conformational template processes, and its dependence on phylogenetic group. In turn, the radiobiology chapters focus on the reorganization of DNA, cell, and population variability under low-dose irradiation, sparking indirect processes and adaptive response. The radiation ecology and epidemiology parts present data on the consequences of nuclear plants and related accidents for ecological systems and human beings. Here some approaches to estimating radiation risks are also offered. Evolution laws are demonstrated in the genomic universe, plant-microbe symbiosis, stabilizing and destabilizing (directional) selection. The last essay demonstrates the principles of organization operating in local animal populations, which are approached as social organisms of complex systemic nature. The chapter 'Radiation-Induced Aging and Genetic Instability of Mesenchymal Stem Cells: An Issue for Late Health Effects?' is available open access under a CC BY 4.0 license.

"An in-depth, scientific—yet hopeful and positive—look at how the brain and body work together . . . [Dr. Martha Herbert] has developed a new way of seeing autism."—Library Journal After years of treating patients and analyzing scientific data, Harvard Medical School researcher and clinician Dr. Martha Herbert offers a revolutionary new view of autism and a transformative strategy for dealing with it. Autism, she concludes, is not a hardwired impairment programmed into a child's genes and destined to remain fixed forever. Instead, it is the result of a cascade of events, many seemingly minor. And while other doctors may dismiss your child's physical symptoms—the anxiety, sensory overload, sleeplessness, frequent illnesses or seizures—as coincidental or irrelevant, Dr. Herbert sees them as vital clues to what the underlying problems are, and how to help. Drawing from the newest research, technologies, and insights, as well as inspiring case studies of both children and adults, Dr. Herbert guides you toward restoring health and resiliency in your loved one with autism. Her specific recommendations aim to provide optimal nutrition, reduce toxic exposures, limit stress, and open the door to learning and creativity. As thousands of families who have cobbled together these solutions themselves already know, this program can have dramatic benefits—for your child with autism, and for you, your whole family, and perhaps your next baby as well. "Invaluable . . . a must-read . . . Dr. Martha Herbert gets it. She not only gets it, but she puts it out there in an awesome book so the rest of us can get it, too."—Autism Watch "[Herbert] goes further than most autism specialists. Her impressive science background merges with common sense and even intuitive sense [making] complex scientific and medical materials seamlessly blend with a holistic viewpoint."—Relieve Autism "Hope and practical guidance . . . With this easy-to-read book, parents can gain wisdom on how to guide your child to achieve a healthy and thriving life."—Mom Central

This book describes how the creation of new digital services—through vertical and horizontal integration of data coming from sensors on top of existing legacy systems—that has already had a major impact on industry is now extending to healthcare. The book describes the fourth industrial revolution (i.e. Health 4.0), which is based on virtualization and service aggregation. It shows how sensors, embedded systems, and cyber-physical systems are fundamentally changing the way industrial processes work, their business models, and how we consume, while also affecting the health and care domains. Chapters describe the technology behind the shift of point of care to point of need and away from hospitals and institutions; how care will be delivered virtually outside hospitals; that services will be tailored to individuals rather than being designed as statistical averages; that data analytics will be used to help patients to manage their chronic conditions with help of smart devices; and that pharmaceuticals will be interactive to help prevent adverse reactions. The topics presented will have an impact on a variety of healthcare stakeholders in a continuously global and hyper-connected world. · Presents explanations of emerging topics as they relate to e-health, such as Industry 4.0, Precision Medicine, Mobile Health, 5G, Big Data, and Cyber-physical systems; · Provides overviews of technologies in addition to possible application scenarios and market conditions; · Features comprehensive demographic and statistic coverage of Health 4.0 presented in a graphical manner.
