Mary Douglas intended *Risk and Acceptability* as a review of the existing literature on the state of risk theory. Unsatisfied with the current studies of risk, which she found to be flawed by individualistic and psychologistic biases, she instead uses the book to argue risk analysis from an anthropological perspective. Douglas raises questions about rational choice, the

provision of public good and the autonomy of the individual.

Risk Analysis in Theory and Practice Haynes Publishing Group
Reinsurance is an important production factor of non-life insurance. The efficiency and the capacity of the reinsurance market directly regulate those of insurance markets. The purpose of this book is to provide a concise introduction to risk theory, as well as to its main application procedures to reinsurance. The first part of the

book covers risk theory. It presents the most prevalent model of ruin theory, as well as a discussion on insurance premium calculation principles and the mathematical tools that enable portfolios to be ordered according to their risk levels. The second part describes the institutional context of reinsurance. It first strives to clarify the legal nature of reinsurance transactions. It describes the structure of the reinsurance market and then the different legal and technical features of reinsurance contracts, known as reinsurance 'treaties' by practitioners. The third part creates a link between the theories presented in the first part and the practice described in the second

one. Indeed, it sets out, mostly through examples, some methods for pricing and optimizing reinsurance. The authors aim is to apply the formalism presented in the first part to the institutional framework given in the second part. It is reassuring to find such a relationship between approaches seemingly abstract and solutions adopted by practitioners. Risk Theory and Reinsurance is mainly aimed at master's students in actuarial science but will also be useful for practitioners wishing to revive their knowledge of risk theory or to quickly learn about the main mechanisms of reinsurance.

Electric Field Analysis is both a student-friendly textbook and a valuable tool for engineers and physicists engaged in the design work of high-voltage insulation systems. The text begins by introducing the physical and mathematical fundamentals of electric fields, presenting problems from power and dielectric engineering to show how the theories are put into practice. The book then describes various techniques for electric field analysis and their significance in the validation of numerically computed results, as well as: Discusses finite difference, finite element,

charge simulation, and surface charge simulation methods for the numerical computation of electric fields Provides case studies for electric field distribution in a cable termination, around a post insulator, in a condenser bushing, and around a gas-insulated substation (GIS) spacer Explores numerical field calculation for electric field optimization, demonstrating contour correction and examining the application of artificial neural networks Explains how high-voltage field optimization studies are carried out to meet the desired

engineering needs Electric Field Analysis is accompanied by an easy-to-use yet comprehensive software for electric field computation. The software, along with a wealth of supporting content, is available for download with qualifying course adoption.

From the New York Times bestselling author of *The Last Wife of Henry VIII* comes a novel about the bitter rivalry between Queen Elizabeth I and her fascinating cousin, Lettice Knollys, for the love of one extraordinary man.

Powerful, dramatic and full of

the rich history that has made Carolly Erickson's novels perennial bestsellers, this is the story of the only woman to ever stand up to the Virgin Queen—her own cousin, Lettice Knollys. Far more attractive than the queen, Lettice soon won the attention of the handsome and ambitious Robert Dudley, Earl of Leicester, a man so enamored of the queen and determined to share her throne that it was rumored he had murdered his own wife in order to become her royal consort.

The enigmatic Elizabeth allowed Dudley into her heart, and relied on his devoted

service, but shied away from the personal and political risks of marriage. When Elizabeth discovered that he had married her cousin Lettice in secret, Lettice would pay a terrible price, fighting to keep her husband's love and ultimately losing her beloved son, the Earl of Essex, to the queen's headsman. This is the unforgettable story of two women related by blood, yet destined to clash over one of Tudor England's most charismatic men.

Despite nearly universal critical acclaim for Robert Penn Warren's later poetry, much about this large body of work remains unexplored, especially the psychological sources of these poems' remarkable energy. In this groundbreaking work, Warren scholar Joseph R. Millichap takes advantage of current research on developmental psychology, gerontology, and end-of-life studies to offer provocative new readings of Warren's later poems, which he defines as those published after *Audubon: A Vision* (1969). In these often intricate poems, Millichap sees something like an autobiographical epic focused on the process of aging, the

inevitability of death, and the possibility of transcendence. Thus Warren's later poetry reviews an individual life seen whole, contemplates mortality and dissolution, and aspires to the literary sublime. Millichap locates the beginning of Warren's late period in the extraordinary collection *Or Else: Poem/Poems* 1968--1974, basing his contention on the book's complex, indeed obsessive sequencing of new, previously published, and previously collected poems unified by themes of time, memory, age, and death. Millichap offers innovative readings of *Or Else* and Warren's five other late gatherings of poems -- *Can I See Arcturus* from *Where I Stand?: Poems*

1975; *Now and Then: Poems* 1976--1978, winner of the Pulitzer Prize; *Being Here: Poetry* 1977--1980; *Rumor Verified: Poems* 1979--1980; and *Altitudes and Extensions* 1980--1984. Among the autobiographical elements Millichap brings into his careful readings are Warren's loneliness in these later years, especially after the deaths of family members and friends; his alternating feelings of personal satisfaction and emptiness toward his literary achievements; and his sense of the power, and at times the impotence, of memory. Millichap's analysis explores how Warren often returned to images and themes of his earlier poems, especially those involving youth

and midlife, with the new perspective given by advancing age and time's passage. Millichap also relates Warren's work to that of other poets who have dealt profoundly with memory and age, including Robert Frost, T. S. Eliot, Thomas Hardy, and, at times, John Milton, William Wordsworth, and the whole English and American nineteenth-century Romantic tradition. An epilogue traces Warren's changing reputation as a poet from the publication of his last volume in 1985 through his death in 1989 and the centennial of his birth in 2005, concluding persuasively that the finest of all of Warren's literary efforts can be found in his later poetry, concerned as it is

with the work of aging and the quest for transcendence. Rival to the Queen Gun Digest Books

Electric Field Analysis Farrar, Straus and Giroux

In April 1991, in a little Wisconsin town about a hundred miles southwest of the town where I grew up, a misfit boy was kidnapped by a group of high school kids who, later, would testify they'd merely meant to

frighten him, to drive him around for a while. Somehow they ended up at the river, whooping and hollering on a two-lane bridge. Somehow the boy was shoved, he jumped, he slipped—accounts vary—into the icy water. The kids told police they never heard a splash; one reported seeing a brilliant flash of light. (Several people in the area witnessed a similar light, while others recalled hearing something "kind of like thunder.") All night, volunteers walked the river's edge, but it was dawn before the body was found in a barn a good mile from the bridge . . . The owner of the barn had been the one to discover the body, and she said the boy's cheeks were rosy, his skin warm to

the touch. A sweet smell hung in the air. "It was," she said "as if he were just sleeping." And then she told police she believed an angel had carried him there. For years, it had been said that an angel lived in the river. Residents flipped coins into the water for luck, and a few claimed they had seen the angel, or known someone who'd seen it. The historical society downtown had a farmwife's journal, dated 1898, in which a woman described how an angel had rescued her family from a flood. Now, as the story of the boy's death spread, more people came forward with accounts of strange things that had happened on that night. Dogs had barked without ceasing till dawn; livestock

broke free of padlocked barns. Someone's child crayoned a bridge and, above it, a wide-winged tapioca angel. A miracle? A hoax? Or something in between? With acute insight and great compassion, A. Manette Ansary captures the inner life of a town and its residents struggling to forge a new identity in the face of a rapidly changing world.

Risk: A Very Short Introduction Penguin
Cold and ultracold collisions occupy a strategic position at the intersection of several powerful themes of current research in chemical physics, in atomic, molecular and optical physics, and even in condensed matter. The nature of these collisions has important consequences for optical manipulation of inelastic and reactive processes, precision

measurement of molecular and atomic properties, matter-wave coherences and quantum-statistical condensates of dilute, weakly interacting atoms. This crucial position explains the wide interest and explosive growth of the field since its inception in 1987. The author reviews elements of the quantum theory of scattering theory, collisions taking place in the presence of one or more light fields, and collisions in the dark, below the photon recoil limit imposed by the presence of any light field. Finally, it reviews the essential properties of these mesoscopic quantum systems and describes the key importance of the scattering length to condensate stability.
