Preparedness and Response to a Rural Mass Casualty Incident

National Academies Press
Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die

before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent

advances in science could lead to new discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. Strategies to Improve Cardiac Arrest Survival examines the complete system of response to cardiac arrest in the United States and identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of Strategies to

Improve Cardiac Arrest Survival provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and private industry to improve health outcomes from sudden cardiac arrest across the United States.

Emergency Medical Responder Jones & Bartlett Learning EMS Agenda for the Future Prentice Hall Catastrophic disasters occurring in 2011 in the United States and worldwide—from the tornado in Joplin,

Missouri, to the earthquake and tsunami in Japan, to the earthquake in New Zealand—have demonstrated that even prepared communities can be overwhelmed. In 2009, at the height of the influenza A (H1N1) pandemic, the Assistant Secretary for Preparedness and Response at the Department of Health and Human Services, along with the Department of Veterans Affairs and the National Highway Traffic Safety Administration, asked the Institute of Medicine (IOM) to convene a committee of experts to develop national guidance for

use by state and local public health officials and health-sector agencies and institutions in establishing and implementing standards of care that should apply in disaster situations—both naturally occurring and man-made—under conditions of scarce resources. Building on the work of phase one (which is described in IOM's 2009 letter report, *Guidance for Establishing Crisis Standards of Care for Use in Disaster Situations*), the committee developed detailed templates enumerating the functions and tasks of the key

stakeholder groups involved in crisis standards of care (CSC) planning, implementation, and public engagement-state and local governments, emergency medical services (EMS), hospitals and acute care facilities, and out-of-hospital and alternate care systems. Crisis Standards of Care provides a framework for a systems approach to the development and implementation of CSC plans, and addresses the legal issues and the ethical, palliative care, and mental health issues that agencies and organizations at each level of a disaster response should address. Please note: this report is not intended to be a detailed guide to emergency preparedness or disaster response. What is described in this report is an extrapolation of existing incident management practices and principles. Crisis Standards of Care is a seven-volume set: Volume 1 provides an overview; Volume 2 pertains to state and local governments; Volume 3 pertains to emergency medical services; Volume 4 pertains to hospitals and acute care facilities; Volume 5 pertains to out-of-hospital care and alternate care systems; Volume 6 contains a public engagement toolkit; and Volume 7 contains appendices with additional resources. State of Wisconsin Highway Safety Plan Jones & Bartlett Learning Public safety professionals and emergency responders today face greater threats than ever before in our history. The traditional role of law enforcement has vastly expanded to require extraordinarily broad-based emergency response

capabilities. Law Enforcement Responder: Principles of Emergency Medicine, Rescue, and Force Protection prepares homeland security leaders, law enforcement officers, security professionals, and public safety officials for the wide range of emergency responses they must perform on a daily basis. The textbook addresses all of the competency statements in the National EMS Education Standards at the Emergency

Medical Responder level, as well as additional lifesaving content specific to law enforcement that far exceeds the core curriculum. Important Notice: The digital edition of this book is missing some of the images or content found in the physical edition. Emergency Medical Responder Human Kinetics Emergency Responder: Advanced First Aid for Non-EMS Personnel is not just another first-aid book. Designed for working professionals,

this flexible program blends textbook with online modules and instructor-led hands-on training events. Drawing from their years of experience training and developing emergency response teams, the authors cover the most important skills needed in order to effectively respond to life-threatening events. Carefully designed skill sheets included in the text assist readers in developing the competency necessary to perform each skill with accuracy and confidence. Establishing a foundation in the

basic concepts of emergency medical care, the text presents in a logical, easy-to-follow format many of the most common illnesses and injuries responders are likely to encounter. The authors provide realistic depth and breadth of information in a way that will make you successful caring for people who have fallen victim to sudden illness or injury.

In the devastation that follows a major disaster,

there is a need for multiple sectors to unite and devote new resources to support the rebuilding of infrastructure, the provision of health and social services, the restoration of care delivery systems, and other critical recovery needs. In some cases, billions of dollars from public, private and charitable sources are invested to help communities recover.

National rhetoric often

characterizes these efforts as a "return to normal." But for many American communities, pre-disaster conditions are far from optimal. Emergency

Services
(EMS) is a
critical
component of

our nation's emergency and trauma care system, providing response and medical transport to millions of sick and injured Americans each year. At its best, EMS is a crucial link to survival in the chain of care, but within the last several years, complex problems facing the emergency care system have emerged. Press coverage has highlighted instances of slow EMS response times,

ambulance diversions, trauma center closures, and ground and air medical crashes. This heightened public awareness of problems that have been building over time has underscored the need for a review of the U.S. emergency care system. Emergency Medical Services provides the first comprehensive study on this topic. This new

book examines the operational structure of EMS by presenting an in-depth analysis of the current organization, delivery, and financing of these types of services and systems. By addressing its strengths, limitations, and future challenges this book draws upon a range of concerns:

- The evolving role of EMS as an integral component of the overall health care

system. • EMS interest to system planning, preparedness, and coordination at the federal, state, and local levels. • EMS funding and infrastructure investments. • EMS workforce trends and professional education. • EMS research priorities and funding. Emergency Medical Services is one of three books in the Future of Emergency Care series. This book will be of particular

emergency care providers, professional organizations, and policy makers looking to address the deficiencies in emergency care systems. • Emergency Medical Responder: Your First Response in Emergency Care - Navigate Essentials Access Springer Science & Business Media "This textbook provides real world case

scenarios, tips for working with other members of the emergency response team, and essential coverage of information needed to succeed in the field of emergency first response. Proceedings of the 5th Rocky Mountain Region Disaster Mental Health Conference Jones & Bartlett Learning September 11, 2001 in the U.S., March 11, 2004 in Madrid – just two examples of a series of major terror attacks against NATO member states on both sides of the Atlantic. We now know that international terrorism is capable of transboundary planning and military style

execution of attacks, resulting in several thousand dead and wounded. In the future even larger terror attacks can no longer be ruled out, including the deployment of weapons of mass destruction. This new form of catastrophic terrorism poses a major challenge to the first responder community in their search and rescue operations, since these new threats represent an unprecedented risk for their

health, possibly even questioning their own survival. Since the first responders are the first line of defence of every community in the aftermath of such a terror attack, it is essential for every community to ensure that its first responders are able to provide their valuable services even in such extreme situations. The 2004

tsunami, hurricanes Rita and Katrina, and the wars in Iraq and Afghanistan affect millions of lives daily. Potential events such as Avian Flu pandemic, global warming and the increasing threats of spreading unrest in the Middle East are concerns that weigh heavily on us all. November 8-11, 2006, the Rocky Mountain Region Disaster Mental Health

Institute held their Annual four-day Disaster Mental Health Conference. The theme of the conference was "TAKING CHARGE IN TROUBLED TIMES: Response, Resilience, Recovery and Follow-up." This edition contains the major papers presented at the conference and summaries of additional presentations. They address some of the major crisis events confronting our societies in recent years, namely, large disasters such as hurricanes Katrina and Rita; case studies such as Abu Ghraib, and traumatic events such as a night club suicide bombing, the role of cultural sensitivity and ethics in disaster settings, resilience, and the importance of planning, education and taking care of our first responders and mental health professionals. An additional concern with information includes information about preparation of communities and families for deployment and return of military personnel. The importance of planning for how mental health personnel can respond in the event of an Avian Flu Pandemic is also discussed. Presenters are drawn from researchers and responders

from Wyoming, the United States, and the United Kingdom. <http://www.rmrintstitute.org> The Rocky Mountain Region Disaster Mental Health Institute is a 501(c)3 Non-profit Organization Emergency Medical Responder: Your First Response in Emergency Care Includes Navigate 2 Essentials Access + Emergency Medical Responder: Your First
