Build your own intelligent agent system... Intelligent agent technology is a tool of modern computer science that can be used to engineer complex computer programmes that behave rationally in dynamic and changing environments. Applications range from small programmes that intelligently search the Web buying and selling goods via electronic commerce, to autonomous space probes. This powerful technology is not widely used, however, as developing intelligent agent software requires high levels of training and skill. The authors of this book have developed and tested a methodology and tools for developing intelligent agent systems. With this methodology (Prometheus) developers can start agent-oriented designs and implementations easily from scratch saving valuable time and resources. *Developing Intelligent Agent Systems* not only answers the questions " what are agents? " and " why are they useful? " but also the crucial question: " how do I design and build intelligent agent systems? " The book covers everything a practitioner needs to know to begin to effectively use this technology - including an introduction to the notion of agents, a description of the concepts involved, and a software engineering methodology. Read on for: a practical step-by-step introduction to designing and building intelligent agent systems. a full life-cycle methodology for developing intelligent agent systems covering specification, analysis, design and implementation of agents. Respected conservative talk show host, blogger and TV commentator Dana Loesch gives her views on the history and intent of the Second Amendment and discusses what she believes gun confiscation would mean to Americans' basic rights as citizens. How many people in America today are truly well-versed

in the history of the Second Amendment, and why it was included in the Bill of Rights? In **HANDS OFF MY GUN**, Dana Loesch explains why the Founding Fathers included the right to bear arms in the Bill of Rights, and argues that "gun control" regulations throughout history have been used to keep minority populations under control. She also contends that current arguments in favor of gun control are primarily based on emotions and fear. This narrative is a must-read for every Second Amendment supporter. Dana Loesch is a determined and fierce advocate for those rights and shouts out: hands off my gun!

Short-Straw Bride (The Archer Brothers Book #1) CRC Press

We all know individuals who, though seemingly naïve about the shrewd ways of the world, ascend to the top of their professions and find peace and satisfaction in their personal lives. Admiring even envying such people, we wonder what makes their lives work. Can it be that they are tapped into an unseen power that guides them from within? **Conquering the Mouth of the Dragon** is an adventurous novel, teeming with suspense, mystery, and intrigue. Based on actual events, the characters are drawn from real people who lived through situations much like those described in the book.

Constance McKenna, a feng shui designer for a major corporation in San Francisco, travels to China to attend a seminar. Her odyssey begins the moment she leaves her house on her way to the airport; mysterious and frightening events follow at a rapid pace. Her faith in herself and her belief in the powers that guide her life are tested again and again as she travels through unfamiliar places. The cast of characters in **Conquering the Mouth of the Dragon** is as cryptic as the circumstances surrounding Constance's journey. None is more baffling than Lang DeBjon, for whom Constance alternately feels suspicion and attraction. Readers even those unfamiliar with metaphysics will easily identify with the feelings of fear and determination interspersed with hopelessness. It is a story of triumph over adversity, a story of success.

In this volume, a distinguished set of international scholars examine the nature of collaboration between life partners in the sciences, with particular attention to the ways in which personal and professional dynamics can foster or inhibit scientific practice. Breaking from traditional gender analyses which focus on divisions of labor and the assignment of credit, the studies scrutinize collaboration as a variable process between partners living in the nineteenth and twentieth centuries who were married and divorced, heterosexual and homosexual, aristocratic and working-class and politically right and left. The contributors analyze cases shaped by their particular geographical locations, ranging from retreat settings like the English countryside and Woods Hole, Massachusetts, to university laboratories and urban centers in Berlin, Stockholm, Geneva and London. The volume demonstrates how the terms and meanings of collaboration, variably shaped by disciplinary imperatives, cultural mores, and the agency of the collaborators themselves, illuminate critical intellectual and institutional developments in the modern sciences.
