Knox Tony Northrup

Donna Shirley's 35-year career as an aerospace engineer reached a jubilant pinnacle in July 1997 when Sojourner--the solar-powered, self-guided, microwave-oven-sized rover--was seen exploring the Martian landscape in Pathfinder's spectacular images from the surface of the red planet. The event marked a milestone in space, but for Donna Shirley, the leader of the mostly male team that designed and built Sojourner--and the first woman ever to manage a NASA program--it marked a triumph of another kind. Managing Martians is Shirley's captivating memoir of a life and career spent reaching for the stars. From her seemingly outlandish aspiration at age ten to build aircraft, to abandoning high school Home Ec in favor of mechanical drawing, and, at sixteen, becoming a licensed pilot, Shirley defied expectations from the beginning. In a vivid narrative, rich with anecdotes and thrilling turning points, Shirley recounts the intense battles she waged to defend her vision and the ingenuity and resourcefulness

of her committed team. Her moment-by-cliffhanging-moment account of Pathfinder's landing and Sojourner's first tentative foray across the sands of Mars brilliantly captures the fulfillment of a lifelong dream as it heralds a brave new era of space exploration.

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. Robert J. Blackwell Assistant Secretary for Maritime Affairs

Some days, being a kid ain't pretty. You want to be the hero of the story but end up being your own worst enemy. And then life throws up never-ending problems for you to solve. Three kids. Endless adventures. Some side-splittingly hilarious, some just plain terrifying. This comical treasure trove of stories doubles as a 'how-to' manual for kids. For example, it shows how to: deal with schoolyard bullies, silence monster brats, organise a protest march at school, get rid of incriminating evidence and dodge a herd of angry cattle. And that's just for starters. Life was never going to be boring living out west on a farm. This is an action-packed adventure story that is

entertaining for readers aged 9-13, middle school students, and adults (of all ages). It explores themes of family, friendship and the importance of facing challenges with a pinch of laughter and a lot of persistence.

Stop feeling sorry for yourself. Stop being trapped with memories that you can't let go. Stop holding yourself back from your true ceiling. Each page takes less than 7 seconds to read, but took me 7 years to understand. By the end of this journey, you will be where you need to and want to be in life. The choice is yours. Where do you want to go?

Managing Martians Les Editions Pix'N Love

In today's digital world we produce vast amounts of data; photos, videos, music, documents, and more. Our risk of catastrophic data loss has never been greater as many of us rely on third parties or "The Cloud" for data storage and security. The question we must ask ourselves is simply what happens when, not if, but when stormy weather strikes, the cloud opens up, and our data is lost forever? Over the years,

we've all heard reports of large corporations providing cloud storage backup losing customers' critical data. The bottom line is, the cloud isn't as secure as many believe it to be. In the Terms Of Service, which we must all agree to, most of these companies are provided legal protection against data loss. Many of us are not aware of or do not practice the 3-2-1 time-honored backup strategy which states, you must have 3 copies of your data at all times. A primary (working copy), secondary (archival copy), and an off-site (cold-storage copy) for disaster recovery. This book covers the archival data backup portion of the 3-2-1 rule by providing a step-by-step easy, and affordable method of creating a safe and secure local data backup solution. This includes an easy-to-follow installation and configuration of an Unraid Server. I've deliberately used older components unearth from my garage to show that shiny new "expensive" parts are not required to build a reliable, safe, and secure backup solution. By providing both practical knowledge and

understanding this book will continue to be an asset for many years to come. Don't wait! Now is the time to backup and safeguard your digital life! Grab a cup of tea or maybe some coffee and let's get started?

Obvious Conclusions Franklin Classics

Sentiment analysis and opinion mining is the field of study that analyzes people's opinions, sentiments, evaluations, attitudes, and emotions from written language. It is one of the most active research areas in natural language processing and is also widely studied in data mining, Web mining, and text mining. In fact, this research has spread outside of computer science to the management sciences and social sciences due to its importance to business and society as a whole. The growing importance of sentiment analysis coincides with the growth of social media such as reviews, forum discussions, blogs, micro-blogs, Twitter, and social networks. For the first time in human history, we now have a huge volume of opinionated data recorded in digital form for analysis. Sentiment analysis systems are being applied in almost every business and social domain because opinions are central to almost all human activities and are key influencers of our behaviors. Our beliefs and perceptions of reality, and the

choices we make, are largely conditioned on how others see and evaluate the world. For this reason, when we need to make a decision we often seek out the opinions of others. This is true not only for individuals but also for organizations. This book is a comprehensive introductory and survey text. It covers all important topics and the latest developments in the field with over 400 references. It is suitable for students, researchers and practitioners who are interested in social media analysis in general and sentiment analysis in particular. Lecturers can readily use it in class for courses on natural language processing, social media analysis, text mining, and data mining. Lecture slides are also available online.
