One of the most heavily illustrated ornithology references ever written, *Manual of Ornithology* is a visual guide to the structure and anatomy of birds--a basic tool for investigation for anyone curious about the fascinating world of birds. A concise atlas of anatomy, it contains more than 200 specially prepared accurate and clear drawings that include material never illustrated before. The text is as informative as the drawings; written at a level appropriate to undergraduate students and to bird lovers in general, it discusses why birds look and act the way they do. Designed to supplement a basic ornithology textbook, the *Manual of Ornithology* covers systematics and evolution, topography, feathers and flight, the skeleton and musculature, and the digestive, circulatory, respiratory, excretory, reproductive, sensory, and nervous systems of birds, as well as field techniques for watching and studying birds. Each chapter concludes with a list of key references for the topic covered, with a comprehensive bibliography at the end of the volume.

How to Bake Academic Press

Fiftieth anniversary reissue of the founding media studies book that helped establish media art as a cultural category. First published in 1970, Gene Youngblood ' s influential *Expanded Cinema* was the first serious treatment of video, computers, and holography as cinematic technologies.

Long considered the bible for media artists, Youngblood ' s insider account of 1960s counterculture and the birth of cybernetics remains a mainstay reference in today ' s hypermediated digital world. This fiftieth anniversary edition includes a new Introduction by the author that offers conceptual tools for understanding the sociocultural and sociopolitical realities of our present world. A unique eyewitness account of burgeoning experimental film and the birth of video art in the late 1960s, this far- ranging study traces the evolution of cinematic language to the end of fiction, drama, and realism. Vast in scope, its prescient formulations include " the paleocybernetic age, " " intermedia, " the " artist as design scientist, " the " artist as ecologist, " " synaesthetics and kinesthetics, " and " the technosphere: man/machine symbiosis. " Outstanding works are analyzed in detail. Methods of production are meticulously described, including interviews with artists and technologists of the period, such as Nam June Paik, Jordan Belson, Andy Warhol, Stan Brakhage, Carolee Schneemann, Stan VanDerBeek, Les Levine, and Frank Gillette. An inspiring Introduction by the celebrated polymath and designer R. Buckminster Fuller—a perfectly cut gem of countercultural thinking in itself—places Youngblood ' s radical observations in comprehensive perspective. Providing an unparalleled historical documentation, *Expanded Cinema* clarifies a chapter of countercultural history that is still not fully represented in the arthistorical record half a century later. The book will also inspire the current generation of artists working in ever-newer expansions of the cinematic environment and will prove invaluable to all who are concerned with the technologies that are reshaping the nature of human communication.

Simplified Signs presents a system of manual sign communication intended for special populations who have had limited success mastering spoken or full sign languages. It is the culmination of over twenty years of research and development by the authors. The Simplified Sign System has been developed and tested for ease of sign comprehension, memorization, and formation by limiting the complexity of the motor skills required to form each sign, and by ensuring that each sign visually resembles the meaning it conveys. Volume 1 outlines the research underpinning and informing the project, and places the Simplified Sign System in a wider context of sign usage, historically and by different populations. Volume 2 presents the lexicon of signs, totalling approximately 1000 signs, each with a clear illustration and a written description of how the sign is formed, as well as a memory aid that connects the sign visually to the meaning that it conveys. While the Simplified Sign System originally was developed to meet the needs of persons with intellectual disabilities, cerebral palsy, autism, or aphasia, it may also assist the communication needs of a wider audience – such as healthcare professionals, aid workers, military personnel , travellers or parents, and children who have not yet mastered spoken language. The system also has been shown to enhance learning for individuals studying a foreign language. Lucid and comprehensive, this work constitutes a valuable resource that will enhance the communicative interactions of many different people, and will be of great interest to researchers and educators alike.

Hidden Like Anne Frank: 14 True Stories of Survival Springer Science & Business Media

For readers of *The Boy Who Dared* and *Prisoner B-3087*, a collection of unforgettable true stories of children hidden away during World War II. Jaap Sitters was only eight years old when his mother cut the yellow stars off his clothes and sent him, alone, on a fifteen-mile walk to hide with relatives. It was a terrifying night, one he would never forget. Before the end of the war, he would hide in secret rooms and behind walls. He would suffer from hunger, sickness, and the looming threat of Nazi raids. But he would live. This is just one of the true stories told in *Hidden Like Anne Frank*, a collection of eye-opening first-person accounts that share the experience of going into hiding to escape the Holocaust. Some were just toddlers when they were hidden; some were teenagers. Some hid with neighbors or family, while many were with complete strangers. But all know the pain of losing their homes, their families, even their own names. They describe the secret network that kept them safe. And they share the coincidences and close calls that made all the difference.
