First published in 1980, this book rapidly established itself as the indispensable guide to what brought about the French Revolution, and to the debates of historians about the issue. It combined a full critical account of recent controversies with a fresh interpretation taking stock of wherethe debate had led. Since 1980 discussion among historians

has continued as lively as ever, and has moved in directions scarcely explored at that time. The `revisionist' criticism which destroyed the classic mid-century consensus emphasizing the Revolution's social and economic origins has openedthe way to a `post-revisionist' approach focused on cultural change. This new edition brings the subject up to date with an extensisively rewritten survey of the historiography up to the present day, and a revised interpretation modified in the light of research by a new generation of scholars. It will thus remain the starting point for any serious study of thegreatest of all revolutions, which lies at the root of the modern political world. `important book . . . readable and perceptive analysis', Times Higher Education

Invasive Species and Human Health Routledge

Invasive alien plants and animals are known for their disruption of ecosystems and threat to biodiversity. This book highlights their major impact on human health. This includes not only direct effects through contact with the species via bites, wounds and disease, but also indirect effects caused by changes induced in ecosystems by invasive species, such as more water hyacinth increasing mosquito levels and thereby the potential for malaria. Covering a wide range of case studies from different taxa (animals and plants), and giving an overview of the diverse impacts of invasive species on health in developed and developing countries, the book is a significant contribution that will help in prioritizing approaches to controlling invasive species and mitigating their health effects. It covers invasive plants, marine species, spiders and other arachnids, ticks and dust mites, insects, mosquitos and other diptera, freshwater species (invertebrates and fishes), amphibians and reptiles, birds and mammals. The broad spectrum of the analyzed case studies will ensure the appeal of the book to a wide public, including researchers of biological invasions, doctors, policy-makers and managers, and students of invasive species in ecology, animal and plant biology and

public health medicine.

The book focuses on an area called Ma ú a, not because I believe Ma ú a represents the whole of Mozambique as such, but because highlighting a specific area and people helps to understand the Mozambican history more deeply and comprehensively. In any case, it would be impossible to study the experience of all Mozambicans. I am not attempting to write a history textbook of Mozambique, or a glorious history of the liberation struggle, but rather trying to fill a gap in the descriptions of contemporary Mozambican history by delving into matters that have not been written about before.

Can drinking coffee help people live longer? What makes a stock 's price go up? Why did you get the flu? Causal questions like these arise on a regular basis, but most people likely have not thought deeply about how to answer them. This book helps you think about causality in a structured way: What is a cause, what are causes good for, and what is compelling evidence of causality? Author Samantha Kleinberg shows you how to

develop a set of tools for thinking more critically about causes. You'll learn how to question claims, identify causes, make decisions based on causal information, and verify causes through further tests. Whether it's figuring out what data you need, or understanding that the way you collect and prepare data affects the conclusions you can draw from it, Why will help you sharpen your causal inference skills.

Notes from a Frontier Pearson Educaci ó n

"Edgar Wind was one of the most distinguished art historians and philosophers of the twentieth century. He made crucial contributions to debates on aesthetics and on the interdisciplinary nature of cultural history involving such other leading figures as Ernst Cassirer and Erwin Panofsky. It is not always realised, however, that his early thinking was moulded by a concern with the German philosophical tradition, culminating in the analysis of the meaning and function of scientific experimentation and proof. This first edition in English of Edgar Wind's important work *Das Experiment und die Metaphysik: Zur Auflosung der kosmologischen Antinomien* (1934) also carries a new introduction by Matthew Rampley, placing Wind's philosophical thinking in context. The work is being published to coincide with the opening in 2000 of the Sackler Library at Oxford, which will include a Wind Reading Room."

Whisper Writing African Minds

Edgar Wind (1900-1971), German-born art historian, cultural historian, and philosopher, emerges as one of the most brilliant thinkers of his remarkable generation. A student of Panofsky and Cassirer in Hamburg, he was profoundly influenced by the thought of C. S. Peirce and, more especially, Aby Warburg, whom he came to know in the two years before Warburg's death in 1929. Teaching in England and the United States, Wind would do much to promote an interpretive art history crossing

disciplinary boundaries. This richly illustrated volume collects Wind's published articles and his extensive unpublished writings on Michelangelo, the latter never before available. His interpretation of the Sistine Ceiling as a typological programme, its Old Testament scenes adumbrating New Testament events, stands as a classic demonstration of the complex relationships possible between art and ideas. The volume opens with an introduction to Wind's art-historical work by Elizabeth Sears and a survey of recent accomplishments in the field of Renaissance theology by John W. O'Malley, Professor of Church History, Weston Jesuit School of Theology, Cambridge, Massachusetts.
