The Design Manual Simon and Schuster

Willie Sutton, a notorious American bank robber of fifty years ago, was once asked why he persisted in robbing banks. "Because that's where the money is," he is said to have replied. The theory that crime follows opportunity has become established wisdom in criminology; opportunity reduction has become one of the fundamental principles of crime prevention. "The enormous benefits of telecommunications are not without cost." It could be argued that this quotation from *Crime in the Digital Age*, is a dramatic understatement. Grabosky and Smith advise us that the criminal opportunities which accompany these newest technological changes include: illegal interception of telecommunications; electronic vandalism and terrorism; theft of telecommunications services; telecommunications piracy; transmission of pornographic and other offensive material; telemarketing fraud; electronic funds transfer crime; electronic money laundering; and finally, telecommunications in furtherance of other criminal conspiracies. However, although digitization has facilitated a great deal of criminal activity, the authors suggest that technology also provides the means to prevent and detect such crimes. Moreover, the varied nature of these crimes defies a single policy solution. Grabosky and Smith take us through this electronic minefield and discuss the issues facing Australia as well as the international community and law enforcement agencies.

Diagnosing Borderline Personality Disorder (BPD) in young people has long been a tough call for clinicians, either for fear of stigmatizing the child or confusing the normal mood shifts of adolescence with pathology. Now, a recent upsurge in relevant research into early-onset BPD is inspiring the field to move beyond this hesitance toward a developmentally nuanced understanding of the disorder. The Handbook of Borderline Personality Disorder in Children and Adolescents reflects the broad scope and empirical strengths of current research as well as promising advances in treatment. This comprehensive resource is authored by veteran and emerging names across disciplines, including developmental psychopathology, clinical psychology, child psychiatry, genetics and neuroscience in order to organize the field for an integrative future. Leading-edge topics range from the role of parenting in the development of BPD to trait-based versus symptom-based assessment approaches, from the life-course trajectory of BPD to the

impact of the DSM-5 on diagnosis. And of particular interest are the data on youth modifications of widely used adult interventions, with session excerpts. Key areas featured in the Handbook: The history of research on BPD in childhood and adolescence. Conceptualization and assessment issues. Etiology and core components of BPD. Developmental course and psychosocial correlates. Empirically supported treatment methods. Implications for future research, assessment and intervention. The Handbook of Borderline Personality Disorder in Children and Adolescents is a breakthrough reference for researchers and clinicians in a wide range of disciplines, including child and school psychology and psychiatry, social work, psychotherapy and counseling, nursing management and research and personality and social psychology.

The key to the survival of museum collections is a stable indoor environment and vital to this is a well-maintained building with effective environmental services. Environmental Management sets out clearly the theory and practice of achieving an appropriate museum environment for both collections and people. The book emphasises the need for planning and places the environmental needs of museum collections at the forefront of the responsibilities of museum managers. May Cassar stresses the role of the building as the first line of defence against environmental instability, recognising the importance of regular environmental monitoring and control, and the division of museum spaces into critical areas housing collections and non-

critical areas accommodating offices, cafes and communal spaces. Environmental Management presents a strategic approach to environmental management, in contrast to the piecemeal approach to environmental monitoring and control still practised by many museums. However, rather than providing ready solutions and rigid rules, the book introduces principles and ideas on which to base decisions about creating the appropriate environment. For many people, even within the theatre industry, prop making is something of a 'dark art', practised by gifted individuals who manage to produce intricate works battling against short deadlines. However, the skills of prop making are relevant to many industries and contexts, whether for art projects, carnival floats, live action role-play (LARP), model railways or film and television. The options and applications are endless, but the traditional skills remain the same. The Prop Maker's Workshop Manual is a definitive guide to the materials and practices used within the professional performing arts industries, covering both traditional techniques and modern practices. Supported by original hand-drawn illustrations and over 300 colour photographs, topics covered include: paper mache and card construction; flexible canes and withies; timber and steel frameworks; sculpting, moulding and casting processes; texture and paint techniques; GRP and epoxy resins; thermoformable plastics, including Plastazote and Wonderflex and finally, an introduction to life casting.

Ethnomethodology has an elusive relationship with organisation studies. The ethnomethodological work of Harold Garfinkel, and the allied conversation analytic work of Harvey Sacks, is often cited and yet empirical contributions informed by ethnomethodology and conversation analysis remain rare. Organisation studies clearly has a lot to say about work but this is normally related to some broader set of social, economic and political issues. Rarely, if ever, does this research involve an analysis of the mundane and practical details of what actual work consists of. This book acts as an evidence-based corrective by showing how research based on ethnomethodology and conversation analysis can contribute to key issues and debates in organisation studies. Drawing on audio/video recordings from a diverse range of work settings, a team of leading scholars

present a series of empirical studies that illustrate the importance of paying attention to the real-time achievement of organisational processes and practices.
