Applied Process Design for Chemical and Petrochemical Plants: Volume 1 John Wiley & Sons
Although numerical data are, in principle, universal, the compilations presented in this book are extensively annotated and interleaved with text. This translation of the second German edition has been prepared to facilitate the use of this work, with all its valuable detail, by the large community of English-speaking scientists. Translation has also provided an opportunity to correct and revise the text, and to update the nomenclature. Fortunately, spectroscopic data and their relationship with structure do not change much with time so one can predict that this book will, for a long period of time, continue to be very useful to organic chemists involved in the identification of organic compounds or the elucidation of their structure. Klaus Biemann Cambridge, MA, April 1983 Preface to the First German Edition Making use of the information provided by various spectroscopic tech niques has become a matter of routine for the analytically oriented organic chemist. Those who have graduated recently received extensive training in these techniques as part of the curriculum while their older colleagues learned to use these methods by necessity. One can, therefore, assume that chemists are well versed in the proper choice of the methods suitable for the solution of a particular problem and to translate the experimental data into structural information.

From the Muslims' to the Crusaders' conquest Jerusalem is among the world's best known cities. Its most outstanding and constant feature is its shared holiness by three major confessions (Muslim, Jewish and Christian). Covering the Marwanid, the Abbasid, and the Faimid phase, this study describes not only the emergence of conceptions with which the three major confessions share this city, but also their interactions as well as the political circumstances and religious axioms which give each conception its specific shape. Looking for these conceptions of the holy area of the city the Haram has been chosen. This area of the former temple was highly significant to all three confessions. The analysis is based on a careful description of the Haram (focusing on topics like names and traditions, architecture, rituals and customs, visions and dreams), and on the establishment of as many parallels as possible. "The result is a volume of astonishing depth and comprehensiveness [] As a compendium of sources it is unrivalled." Journal of Palestine Studies "The excellent graphics added to each section, culminating in 103 figures, deserve special mention. Also impressive is Kaplony's generous handling of space; it seems that he was aiming for the display of all the texts available to him. [] taking into account Kaplony's treatment of the subject, one is tempted to compare it with that of the precision and care of Swiss watchmakers. Unless new sources come to light, which is not very likely, this book will be the standard work for many

years to come." Jerusalem Studies in Arabic and Islam "This book is an excellent contribution to the growing literature on Islamic Jerusalem, and it will indubitably be of interest to scholars and students of medieval Islamic history." International Journal of Middle East Studies.

Micro-X-ray fluorescence offers the possibility for a position- sensitive and non-destructive analysis that can be used for the analysis of non-homogeneous materials and layer systems. This analytical technique has shown a dynamic development in the last 15 years and is used for the analysis of small particles, inclusions, of elemental distributions for a wide range of different applications both in research and quality control. The first experiments were performed on synchrotrons but there is a requirement for laboratory instruments which offers a fast and immediate access for analytical results. The book discuss the main components of a ?-XRF instrument and the different measurement modes, it gives an overview about the various instruments types, considers the special requirements for quantification of non-homogeneous materials and presents a wide range of application for single point and multi-point analysis as well as for distribution analysis in one, two and three dimensions.

Meteor Showers and their Parent Comets is a unique handbook for astronomers interested in observing meteor storms and outbursts. Spectacular displays of 'shooting stars' are created when the Earth's orbit crosses a meteoroid stream, as each meteoroid causes a bright light when it enters our atmosphere at high speed. Jenniskens, an active meteor storm chaser, explains how meteoroid streams originate from the decay of meteoroids, comets and asteroids, and how they cause meteor showers on Earth. He includes the findings of recent space missions to comets and asteroids, the risk of meteor impacts on Earth, and how meteor showers may have seeded the Earth with ingredients that made life possible. All known meteor showers are identified, accompanied by fascinating details on the most important showers and their parent comets. The book predicts when exceptional meteor showers will occur over the next fifty years, making it a valuable resource for both amateur and professional astronomers.
