Patent Term Adjustments (US Patent and Trademark Office Regulation) (PTO) (2018 Edition) The Law Library presents the complete text of the Patent Term Adjustments (US Patent and Trademark Office Regulation) (PTO) (2018 Edition). Updated as of May 29, 2018 The United States Patent and Trademark Office (Office) is revising the rules of practice pertaining to patent term adjustment in view of the decision by the U.S. Court of Appeals for the Federal Circuit (Federal Circuit) in *Novartis AG v. Lee*. The Federal Circuit confirmed in *Novartis* that any time consumed by continued examination is subtracted in determining the extent to which the period of application pendency exceeds three years, regardless of when the continued examination was initiated. The Federal Circuit, however, decided that the time consumed by continued examination does not include the time after a notice of allowance, unless the Office actually resumes examination of the application after allowance. Accordingly, the Office is revising the rules of practice to provide that the time consumed by continued examination does not include the time after a notice of allowance, unless the applicant files a request for continued examination after such allowance. The Office also is revising the rules of practice to provide that the submission of a request for continued examination after any notice of allowance has been mailed will constitute a failure of an applicant to engage in reasonable efforts to conclude processing or examination of an application and thus result in a reduction of any period of patent term adjustment. The Office is providing an exception to this patent term adjustment reduction provision for a request for continued examination filed solely to submit information cited in a patent office communication in a counterpart application that is submitted to the Office within thirty days of receipt of the patent office communication. Additionally, the Office is clarifying what papers may be submitted after a notice of allowance without the applicant being considered to have failed to engage in reasonable efforts to conclude processing or examination of the application. This book contains: - The complete text of the Patent Term Adjustments (US Patent and Trademark Office Regulation) (PTO) (2018 Edition) - A table of contents with the page number of each section

Discover how biomarkers can boost the success rate of drug development efforts As pharmaceutical companies struggle to improve the success rate and cost-effectiveness of the drug development process, biomarkers have emerged as a valuable tool. This book synthesizes and reviews the latest efforts to identify, develop, and integrate biomarkers as a key strategy in translational medicine and the drug development process. Filled with case studies, the book demonstrates how biomarkers can improve drug development timelines, lower costs, facilitate better compound selection, reduce late-stage attrition, and open the door to personalized medicine. Biomarkers in Drug Development is divided into eight parts: Part One offers an overview of biomarkers and their role in drug development. Part Two highlights important technologies to help researchers identify new biomarkers. Part Three examines the characterization and validation process for both drugs and diagnostics, and provides practical advice on appropriate statistical methods to ensure that biomarkers fulfill their intended purpose. Parts Four through Six examine the application of biomarkers in discovery, preclinical safety assessment, clinical trials, and translational medicine. Part Seven focuses on lessons learned and the practical aspects of implementing biomarkers in drug development programs. Part Eight explores future trends and issues, including data integration, personalized medicine, and ethical concerns. Each of the thirty-eight chapters was contributed by one or more leading experts, including scientists from biotechnology and pharmaceutical firms, academia, and the U.S. Food and Drug Administration. Their contributions offer pharmaceutical and clinical researchers the most up-to-date understanding of the strategies used for and applications of biomarkers in drug development.
