A sequential manual transmission (like the kind of gearbox used on a fully-manual motorcycle) is a type of multi-speed non-synchronous manual transmission, which only allows the driver to select either the next gear (e.g., shifting from second gear to first gear) or the previous gear (e.g. shifting from second gear to third gear), in succession. This restriction avoids accidentally selecting the wrong gear, however, it also prevents the driver from deliberately "skipping" gears.

This is a lending process, so you'll only be able to borrow the book, not

Generally, two types of gear shift pattern are commonly used in commercial vehicles. 1 st-2 nd, 3 rd - 4 th, 5 th-6 th, Rev and Rev-1 st, 2 nd-3 rd, 4 th-5 th, 6 th. In the first type of gear shift pattern, neutral gear is placed in between 3 rd-4 th gear and reverse gear is separate. In this case the gear select position is determined by moving the gear selector lever to left and right and a suitable interlock mechanism is provided for the reverse gear selection.
