World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even

challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine “ smart factories ” in which global systems of manufacturing are coordinated virtually, or implantable mobile

phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which

innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.

The Watch Repairer's  
Manual: Second Edition  
Henry B. Fried was "widely  
acknowledged as the dean of  
American watchmakers." In  
the revised, second edition,  
Fried addresses topics  
important to contemporary  
watch repairers, such as self-  
winding watches,  
waterproofing, calendar  
watches, alarm wristwatches,  
and chronographs. The  
Watch Repairer's Manual  
also includes a fine visual  
dictionary of exploded views  
in isometric, which are very

helpful for ordering watch  
parts. One of the few modern  
books available on the  
techniques of watch repair  
and certainly the most  
esteemed, The Watch  
Repairer's Manual is  
outstanding for its sequence  
of presentation and its many  
useful illustrations, including  
enlarged details of alarm and  
self-winding watches. The  
consummate craftsman and  
master of details, Fried  
himself created the  
illustrations. From teaching  
others, Fried has learned that  
if you have a good

understanding of how and  
why the mechanisms work,  
you will become better at  
fixing any problems you face-  
often without needing to  
consult a book. The Watch  
Repairer's Manual provides:  
- Helpful background  
material, such as full  
descriptions of the main  
divisions of the modern  
watch mechanisms, including  
the purpose and function of  
each unit. - Complete  
directions for cleaning and  
overhauling a watch  
movement for casing. - A  
section devoted to general

---

repairs and troubleshooting. For anyone interested in watch repair, this volume will serve as a working manual, a reference manual, and even a course of study. Assuming little previous knowledge on the part of the reader, Fried provides complete and clear detail on each operation. The Watch Repairer's Manual should be of great value to the student, hobbyist, watch collector, and instrument maker. Henry B. Fried wrote and illustrated 14 books, many pamphlets, and hundreds of articles on

horology, the science of timepieces. The first American to receive the Silver Medal of the British Horological Institute, he served as president of the New York City Horological Society and the New York State Watchmakers Association and vice president of the old Horological Institute of America. The MGB, the epitome of the British sports car, has attracted a huge following because of its

blend of good looks, practicality and decent road manner. During its 18-year production life, from 1962 to 1980, it underwent a bewildering number of changes to specification and equipment. An owner or restorer of an MGB wants to know where their car came in the cycle of production and thus what it should look like and what parts should be fitted, from tail lamps to door handles. Answers to all these questions can only be found in this book, with detailed color photography of the complete range of the cars.
