Force: Character Design from Life Drawing Nana

This book provides discussions on bronchial asthma from a clinical perspective, focusing on the recent studies on its pathophysiology, diagnosis and treatment. It also explores the latest findings regarding the phenotypes and

endotypes of asthmatic patients, making it of particular interest to those involved with non-eosinophilic asthma and eosinophilic asthma. Further, it discusses the importance of ILC 2 in eosinophilic asthma, and the accumulated results from the forced oscillation technique and periostin that are actively practiced in Japan. As some aspects of diagnosis and treatment are different in Western and Asian countries, it is important that the data is disseminated around the globe. The clinical questions addressed by the authors are critical and thought provoking, while the questions raised by the editors are instructive, informative and provide new perspectives on

unresolved issues. This book appeals to wide readership from beginning learners to physicians in clinical practice and scholars engaging in basic research.

This book offers new insights into the language gains of adult learners enrolled in an English-medium instruction (EMI) degree

programme. It provides longitudinal empirical evidence of the phonological gains of the learners; discusses which individual factors contribute to the changes in the learners' pronunciation and investigates whether and to what extent increased exposure to the target language in EMI classrooms leads to incidental learning of second language pronunciation. Furthermore, it expands on the discussions surrounding the Critical Period Hypothesis, the native-speaker norm, foreign language accent and the role of English as a Lingua Franca. The comparative and longitudinal design of the research study fills a significant gap in the literature and the book offers considerable original and important research-informed insights into the fields of EMI, bilingual education and second language acquisition. As such, it is a valuable resource and must-read book for researchers, practitioners and policymakers in these areas.

This book showcases recent developments in the field of Japanese applied linguistics. It covers a wide range of current issues and influential theoretical and methodological frameworks, many of which are of concern not only for Japanese specialists but also applied linguists in general. At the same time, the book provides empirical studies that exemplify how these issues and frameworks manifest themselves in contexts that surround first and second language speakers of Japanese. The book is divided into four sections. The first examines language in action, providing a close analysis of language as it is used in interactions between speakers. The second section looks at sociological diversity in Japanese speakers, considering factors such as gender, age, or background. Section three explores how globalization has affected Japanese language use and acquisition. The final section reflects on classroom teaching of Japanese language and culture. This comprehensive, in-depth study will be useful for researchers and graduate students in both applied linguistics and Japanese linguistics.
