What if Adam and Eve Had a Diary? “ He talks very little. Perhaps it is because he is not bright and is sensitive about it and wishes to conceal it. It is such a pity that he should feel so, for brightness is nothing. It is in the heart that the values lie. I wish I could make him understand that a loving good heart is riches, and riches is enough, and that without it intellect is poverty. ” - Mark Twain, Eve's Diary Mark Twain ’ s short stories aren ’ t about his religious beliefs. In fact, the Diaries of Adam and Eve should be taken with a grain of salt as they are humorous and witty and describe in a unique way the relationship between two human beings, man and woman who eventually end up falling in love with each other. The Federal Aviation

Administration (FAA) has

published the Private Pilot -

Airplane Airman Certification Standards (ACS) document to communicate the aeronautical knowledge, risk management, and flight proficiency standards for the private pilot certification in the airplane category, single-engine land and sea; and multiengine land and sea classes. This ACS incorporates and supersedes the previous Private Pilot Practical Test Standards for Airplane, FAA-S-8081-14. The FAA views the ACS as the foundation of its transition to a more integrated and systematic approach to airman certification. The ACS is part of the safety management system (SMS) framework that the FAA uses to mitigate risks associated with airman certification training and testing. Specifically, the ACS, associated guidance, and test question components of the airman certification system are constructed around the four functional components of an SMS: Safety Policy that defines and describes aeronautical knowledge, flight proficiency, and risk management as integrated components of the airman certification system; Safety Risk Management processes through which internal and external stakeholders identify and evaluate regulatory changes, safety recommendations and other factors that require modification of airman testing and training materials; Safety Assurance processes to ensure the prompt and appropriate incorporation of changes arising from new regulations and safety recommendations; and Safety Promotion in the form of ongoing engagement with both external stakeholders (e.g., the aviation training industry) and FAA policy divisions. The FAA has developed this ACS and its associated guidance in collaboration with a diverse group of aviation training experts. The goal is to drive a systematic approach to all components of the airman certification system, including knowledge test question development and conduct of the practical test. The FAA acknowledges and appreciates

the many hours that these aviation experts have contributed toward this goal. This level of collaboration, a hallmark of a robust safety culture, strengthens and enhances aviation safety at every level of the airman certification system.
