Ántonia and There Will Be Blood, Anna Keeseey's Little Century is a resonant and moving debut novel by a writer of confident gifts. Orphaned after the death of her mother, eighteen-year-old Esther Chambers heads west in search of her only living relative. In the lawless frontier town of Century, Oregon, she's met by her distant cousin, a laconic cattle rancher named Ferris Pickett. Pick leads her to a tiny cabin by a small lake called Half-a-Mind, and there she begins her new life as a homesteader. If she can hold out for five years, the land will join Pick's already impressive spread. But Esther discovers that this town on the edge of civilization is in the midst of a range war. There's plenty of land, but somehow it is not enough for the ranchers—it's cattle against

sheep, with water at a premium. In this charged climate, small incidents of violence swiftly escalate, and Esther finds her sympathies divided between her cousin and a shepherd named Ben Cruff, a sworn enemy of the cattle ranchers. As her feelings for Ben and for her land grow, she begins to see she can't be loyal to both. Little Century maps our country's cutthroat legacy of dispossession and greed, even as it celebrates the ecstatic visions of what America could become.

Dirty Electricity Springer Science & Business Media

When Thomas Edison began wiring New York City with a direct current electricity distribution system in the 1880s, he gave humankind the magic of electric light, heat, and power; in the process, though, he inadvertently opened a Pandora's Box of unimaginable illness and death. Dirty

Electricity tells the story of Dr. Samuel Milham, the scientist who first alerted the world about the frightening link between occupational exposure to electromagnetic fields and human disease. Milham takes readers through his early years and education, following the twisting path that led to his discovery that most of the twentieth century diseases of civilization, including cancer, cardiovascular disease, diabetes, and suicide, are caused by electromagnetic field exposure. In the second edition, he explains how electrical exposure does its damage, and how electricity is causing our current epidemics of asthma, diabetes and obesity. Dr. Milham warns that because of the recent proliferation of radio frequency radiation

from cell phones and towers, terrestrial antennas, Wi-Fi and Wi-max systems, broadband internet over power lines, and personal electronic equipment, we may be facing a looming epidemic of morbidity and mortality. In *Dirty Electricity*, he reveals the steps we must take, personally and as a society, to coexist with this marvelous but dangerous technology.

Asterisk is the leading Open Source Telephony application and PBX software solution. It represents an effective, easy-to-administer, and accessible platform for running enterprise telephony requirements. The real world, however, offers numerous hurdles when running Asterisk in the commercial environment including call routing, resilience, or integrating Asterisk with other systems. This book will show you some of the

ways to overcome these problems. As the follow-up to Packt's highly successful 2005 title *Building Telephony Systems with Asterisk*, this book presents the collected wisdom of Asterisk Professionals in the commercial environment. Aimed at Administrators and Asterisk Consultants who are comfortable with the basics of Asterisk operation and installation, this book covers numerous hands-on topics such as Call Routing, Network Considerations, Scalability, and Resilience – all the while providing practical solutions and suggestions. It also covers more business-related areas like Billing Solutions and a Winning Sales Technique. Even if your interest or experience with Asterisk is lower level, this book will provide a deeper understanding of how Asterisk operates in the real world. Asterisk is deployed across countless enterprises globally. Running on Linux, it has constantly demonstrated its resilience, stability, and scalability and is now the advanced communication solution of choice to many organizations and

consultants. With a foreword from Mark Spencer, the man behind Asterisk, this book presents the accumulated wisdom of three leading Asterisk Consultants and shows the reader how to get the most out of Asterisk in the commercial environment. Over the course of eleven chapters, this book introduces the reader to topics as diverse as Advanced Dial Plans, Network Considerations, and Call Routing, through to Localization, DAHDI, Speech Technology, and Working with a GUI. The book also covers the more nebulous aspects of being an Asterisk professional such as evaluating customer requirements and pitching for contracts. This book represents the wisdom and thoughts of front line consultants. The knowledge they impart will prove informative, thought provoking and be of lasting interest to Asterisk professionals.

Presumption of Innocence in EU Anti-Cartel Enforcement African Books Collective

'We cannot imagine life now without a mobile phone' is a frequent comment when Africans are asked about mobile phones. They have become part and parcel of the communication landscape in many urban and rural areas of Africa and the growth of mobile telephony is amazing: from 1 in 50 people being users in 2000 to 1 in 3 in 2008. Such growth is impressive but it does not even begin to tell us about the many ways in which mobile phones are being appropriated by Africans and how they are transforming or are being transformed

by society in Africa. This volume ventures into such appropriation and mutual shaping. Rich in theoretical innovation and empirical substantiation, it brings together reflections on developments around the mobile phone by scholars of six African countries (Burkina Faso, Cameroon, Ghana, Mali, Sudan and Tanzania) who explore the economic, social and cultural contexts in which the mobile phone is being adopted, adapted and harnessed by mobile Africa.

Artificial Intelligence (AI) will change the lives of people and businesses more fundamentally than many people can even imagine today. This book illustrates the importance of AI in an era of digitalization. It introduces the foundations of AI and

explains its benefits and challenges for companies and entire industries. In this regard, AI is approached not just as yet another technology, but as a fundamental innovation, which will spread into all areas of the economy and life, and will disrupt business processes and business models in the years to come. In turn, the book assesses the potential that AI holds, and clarifies the framework that is necessary for pursuing a responsible approach to AI. In a series of best-practice cases, the book subsequently highlights a broad range of sectors and industries, from production to services; from customer service to marketing and sales; and in industries like retail, health care, energy, transportation and many more. In closing, a dedicated chapter outlines a roadmap for a

specific corporate AI journey. No one can ignore intensive work with AI today - neither as a private person, let alone as a top performer in companies. This book offers a thorough, carefully crafted, and easy to understand entry into the field of AI. The central terms used in the AI context are given a very good explanation. In addition, a number of cases show what AI can do today and where the journey is heading. An important book that you should not miss! Professor Dr. Harley Krohmer University of Bern "Inspiring, thought provoking and comprehensive, this book is wittingly designed to be a catalyst for your individual and corporate AI journey." During the past decade, private enforcement of competition law has slowly taken off in Europe. However, major differences still exist among Member States. By harmonizing a number of procedural rules, the Damages Directive aimed to establish a level playing field among EU Member States. This timely book represents the first assessment of the implementation of the Damages Directive. Offering a comparative perspective, key chapters provide an up-to-date account of the emerging trends in private enforcement of competition law in Europe.

Private Enforcement of EU Competition Law MIT Press

Our intellectual context is very complicated. There are competing pedagogues, divergent epistemological agendas, and flawed participants. The mind is a warzone. The Old Testament depicts a battlefield between the sinful mind and God's revelation. Today, many Christians minimize the intellect and do not recognize how sin impacts thinking. Many do not know how to love God with the mind. Many suffer from anti-intellectual inertia. They think like consumers shopping for knowledge, learning formats, and instructors that conform to their buying preferences. They prefer junk food for their minds. They often

fulfill the role assigned to them by the world—intellectual simplicity, private religiosity, and subjective spirituality. By comprehensively examining Old Testament teaching concerning the mind, this book promotes a spirituality that puts thinking in its proper place. It explains what God requires intellectually of his vice-regents. It shows that our world is a labyrinth, but that God's revelation is our reliable guide. This book motivates readers to strive for mental piety, wisdom, and intellectual development, for the glory of God and the fulfillment of our mandate on earth. Readers will learn from their ancient brethren how to better steward their minds.

Florence Thépot provides the first systematic account of the interaction between competition law and corporate governance. She challenges the 'black box' conception of the firm- or 'undertaking' - in competition law, as applied to increasingly complex corporate relations. The book opens the 'black box' of the firm to understand the internal drivers of collusive behaviour, and proposes a unified approach to cartel enforcement, based on the agency theory. It explores key issues including corporate compliance programmes, the attribution of liability in corporate groups, and structural links between competitors, and should be read by anyone interested in how the evolution of the corporate landscape impacts competition law.

This edited volume features contributions that were originally presented at a State of the Science Colloquium sponsored by the Wireless Technology Research, LLC (WTR) and the International Committee on Wireless Communication Research. Contributions report on the public health impact of wireless communication technologies, including radiofrequency (RF) dosimetry, RF epidemiology, RF toxicology, and clinical and in vitro studies on interference between these technologies and medical devices. WTR has collected and edited papers from each of the presenters, and collected updates to be appended to the original papers.
