HIT or Miss for the Student

HIT or Miss for Student: Lessons Learned from
Health Information Technology Projects presents
and dissects a wide variety of HIT failures so that the
students can understand in each case what went
wrong and why and how to avoid such problems,
without focusing on the involvement of specific
people, organizations, or vendors. The lessons may
be applied to future and existing projects, or used to
understand why a previous project failed. The
student also learns how common causes of failure
affect different kinds of HIT projects and with
different results. Cases are organized by the type of
focus (hospital care, ambulatory care, and
community). Each case provides analysis by an
author who was involved in the project plus the
insight of an HIT expert. This book presents a model
to discuss HIT failures in a safe and protected
manner, providing an opportunity to focus on the
lessons offered by a failed initiative as opposed to
worrying about potential retribution for exposing a
project as having failed. Access expert insight into
key obstacles that must be overcome to leverage IT
and transform healthcare. Each de-identified case
study includes an analysis by a group of industry
experts along with a counter analysis. Cases include a
list of key words and are categorized by project (e.g.
CPOE, business intelligence). Each chapter or case
contains test questions and study suggestions for the
student. Answers are provided as an appendix to the
book. Whether you 're a graduate student in a
health administration or health IT program or
attending training sessions sponsored by their
healthcare organization, this valuable resource for all
who want to understand the dynamics of HIT
projects and why some fail and others succeed.
