The Fifth Edition of A History of the Roman People continues to provide a comprehensive analytical survey of Roman history from its prehistoric roots in Italy and the wider Mediterranean world to the dissolution of the Roman Empire in Late Antiquity in A.D. 600. Clearly organized and highly readable, the text's narrative of major political and military events provides a chronological and conceptual framework for the social, economic, and cultural developments of the periods covered. Major topics are treated separately so that students can easily grasp key concepts and ideas.

The motivation for this book stems from an early exposure to the book Applied Mechanics by John Perry. Professor Perry strove to encourage his readers to understand the applications and use of mathematics in engineering with out insisting that they become immersed in pure mathematics. The following text uses this approach to the application of telecommunications switching. Readers wishing to study the derivation and proof of formulas will be able to do so using relevant references. The existence of low-cost programmable calculators frees practicing engineers from much laborious calculation, allowing more time for creative design and application of the art. The reader should not need to be able to derive formulas in order to apply them just as, to quote Professor Perry, "He should not have to be able to design a watch in order to tell time ... The material for this book has been drawn from my own experience in the field. Inevitably, however, I have used CCITT and Bell System publications for references and in some cases quotation, and I gratefully acknowledge permission for their use. I am also grateful to Stromberg Carlson Corporation for their earlier encouragement and support without which this book would not have been possible. Thanks are also due to Fred Hadfield for his advice and assistance in the preparation of the many figures and to my wife Ada for her support and patience as I pursued the demanding but interesting task of producing the text.

Where is God in the universe if anywhere? Why did God make germs? Why should we be so special? Could the universe have been different? This is a book that brings home, in no uncertain fashion, the discrepancy between the universe envisaged by the ancient sages and prophets and that of modern scientific cosmology, where the possibility of divine intervention looks less and less likely. Butchins demonstrates with clarity how the scientific method may be used, despite certain drawbacks, in an attempt to verify objective truth. It describes how the effect of the Copernican Revolution in the seventeenth century has steadily undermined the basic structure of the three great monotheistic religions of our day, Judaism, Christianity, and Islam, especially with respect to their eschatological concepts. The Eastern religions, being less anthropomorphic, are less affected. The theistic argument from design is shown to be powerful enough to have caused disagreement among present-day scientists, in spite of the strictures of Professor Dawkins. In general, the book attempts to make some sense of the structure of the universe in terms of our own consciousness; it behaves the reader to consider tha

This study explores Customer Relationship Management (CRM) in government. Based on an interdisciplinary literature review and multiple-case study design, a model of Citizen Relationship Management (CiRM) is developed and discussed. The case studies explore the perceptions of CRM/CiRM by administrators, elected officials and consultants as well as its implementation and impact on the municipal level and in a multijurisdictional environment in the United States. Although the explorative part of the study focuses broadly on a theoretical conceptualization of CiRM, the immediate empirical referent of research are the 311 initiatives in the City of Baltimore, the City of Chicago, the City of New York and Miami-Dade County. Thus, the results help administrators and researchers to convey the idea and challenges of 311 well. The study shows that CRM is to a certain extent only partly able to make novel contributions to currently active reform movements in government. In addition, the study's findings support the idea that CiRM provides the means to a different kind of public participation.

This work explains telephone switching systems and how the technology is evolving to accommodate voice-over-IP traffic. Unlike data networks, telephone networks are proprietary. They're purchased as complete systems and are hard if not impossible to modify. Allan Sulkin explains how to acquire, deploy and maintain a system with all the features needed to support essential new applications, and how to get optimal performance from the system you have.

Temptation has never come in a hotter package. You know how people say you can never believe what you read on the interwebs? That a hot guy online is probably a creeper with a beer gut and a shoe fetish, not the sexy beast he pretends to be? So I had no clue that the anonymous blogger who contacted my law firm about his naughty website would be droolworthy in real life. Not that I'm interested in him in that way. Attorneys can't go around sleeping with their clients. Not even if he is the most beautiful man I've ever met and so ridiculously smart he makes my nerdy-girl heart sigh. Besides, he has too much on the line to risk taking a chance on the insane chemistry building between us. We both do. I've always followed the rules. Too bad he makes me want to break each and every one of them.
