In the years since 9/11 Special Forces of many nations have been in almost constant action in covert, high risk operations around the globe. These include the two long conflicts in Iraq and Afghanistan, fighting nationalist insurgents and jihadist terrorists, as well as other lesser known operations. The weapons used by SF are a constant source of interest and speculation, as are SF training, methods and vehicles. The armories of these elite units have developed rapidly to meet their demands and the ever more sophisticated threat. They include for example suppressed piston-driven carbines, programmable grenade launchers that airburst behind hidden enemy and sniper rifles of extreme accuracy and range. This highly researched book gives the reader a privileged insight into this secret world exploring the custom-built weapons that operators carry on capture/kill missions in the 21st Century.

The Law of Self Defense, 2nd Edition Springer

In 2010, more than 105,000 people were injured or killed in the United States as the result of a firearm-related incident. Recent, highly publicized, tragic mass shootings in Newtown, CT; Aurora, CO; Oak Creek, WI; and Tucson, AZ, have sharpened the American public's interest in protecting our children and communities from the harmful effects of firearm violence. While many Americans legally use firearms for a variety of activities, fatal and nonfatal firearm violence poses a serious threat to public safety and welfare. In January 2013, President Barack Obama issued 23 executive orders directing federal agencies to improve knowledge of the causes of firearm violence, what might help prevent it, and how to minimize its burden on public health. One of these orders directed the Centers for Disease Control and Prevention (CDC) to, along with other federal

agencies, immediately begin identifying the most pressing problems in firearm violence research. The CDC and the CDC Foundation asked the IOM, in collaboration with the National Research Council, to convene a committee tasked with developing a potential research agenda that focuses on the causes of, possible interventions to, and strategies to minimize the burden of firearm-related violence. Priorities for Research to Reduce the Threat of Firearm-Related Violence focuses on the characteristics of firearm violence, risk and protective factors, interventions and strategies, the impact of gun safety technology, and the influence of video games and other media.
