Signature in the Cell: DNA and the Evidence for ...

In Signature in the Cell, philosopher of science Stephen C. Meyer shows how the digital code in DNA points powerfully to a designing intelligence behind the origin of life. The book will be published on June 23 by HarperOne. Unlike previous arguments for intelligent design, Signature in the Cell presents a radical and comprehensive new case, revealing the evidence not merely of individual features of biological complexity but rather of a fundamental constituent of the universe: information.

Much of the emphasis of Signature in the Cell is on information theory. We all know that DNA contains the information necessary to build and run living organisms. During the development of computing systems, mathematician, Claude Shannon developed "The Mathematical Theory of Communications." Information theory relates the probability of a specific sequence of information in a sequence of bits.

Much confusion surrounds the concept of intelligent design. Frequently misrepresented by the media, politicians, and local school boards, smart design could be defended on purely scientific grounds in light of the exact same

rigorous procedures that are pertinent to every projected origin-of-life theory.
