With a full and active service life of more than 40 years with the Royal Navy and the RAF, the Westland Wessex was one of the most versatile helicopters of the Cold War era. As a British-built turbine-powered development of the American Sikorsky H-34, the Westland Wessex was developed and produced under license by Westland Aircraft (later Westland Helicopters). One of the main differences from Sikorsky's H-34 was the replacement of the piston-engine power plant with a turboshaft engine. The Wessex was the first helicopter to be produced in large numbers that made use of a gas turbine engine. Early models were powered by a single Napier

Gazelle engine, while later builds used a pair of Rolls-Royce Gnome engines.

This manual describes and illustrates the techniques and procedures for preparing and rigging typical container loads for low-velocity and high-velocity airdrop. It also contains and illustrates procedures for rigging typical supply loads of POL, 55-gallon drums of gasoline, individual combat meals, containers for airdrop in jungle terrain, AN/TPS-22 radar set in A-22 cargo bag, gyro azimuth theodolite in A-21 cargo bag, and 50-g.p.m. dispenser in A-22 cargo bag. These procedures will not be used for rigging ammunition in containers for airdrop; procedures outlined in TM 10-500-53/TO 13C7-18-41 will be used for this purpose.

Hearings

Developed to replace the UH-1 Iroquis, Sikorsky's UH-60 Black Hawk first entered service in 1979. A four-blade, twin-engine, medium-lift utility helicopter, the UH-60 serves as the U.S. Army's primary tactical transport helicopter. Modified versions include models for the U.S. Navy and Air Force, and specialized versions including the UH-60C (modified for Command and Control missions), EH-60A (electronic systems operations and electronic warfare), and the UH-60Q (medical transport). Two major variants of the Black Hawk currently exist: the UH-60L and UH-60M. The UH-60L incorporates improvements to the basic design that provide more power and lifting capability, as well as automatic flight control. The newer UH-60M features upgraded engines, improved rotor blades, and state-of-the-art flight controls that will allow the helicopter's service life to extend to 2020 and beyond. Over 2500 Black Hawks have been built, and nearly 1000 more are currently on order. Black Hawks have seen combat service for the U.S. Military in Grenada, Panama, Somalia, Afghanistan and Iraq. Other nations also employ the UH-60 including Brazil, Colombia, Israel, Mexico, Taiwan, Australia, Japan, and Turkey. Created by Sikorsky and the U.S. Army, this pilot's flight operating manual profiles the UH-60Q Black Hawk. Over 500 pages long, this
