From Lynda La Plante, one of the world's greatest crime writers, Royal Heist is a big, dashing novel of deception, passion, and international suspense, in which a man with a dangerous double life masterminds the greatest robbery of all time. With a beautiful family and a magnificent fortune, Edward de Jersey is making news with his prized racehorse Royal Flush. But while de Jersey socializes with the cream of English society, he keeps to himself the details of his background and how he acquired his wealth. The son of an East End bookie, de Jersey reinvented himself as an aristocrat after pulling off some of England's most notorious heists. He has no intention of ever going back to crime. . . until his financial adviser loses his entire fortune in a disastrous investment and de Jersey decides to retrieve it the old-fashioned way: by stealing it. From Monaco to the Hamptons, from London to the shadowy back alleys of cyberspace, de Jersey goes into action, using guile, force, and the latest technology to put together the perfect plan. Drawing on the expertise of a computer hacker with a passion for Elvis, the inside knowledge of a dying aristocrat, and the skill of a professional impersonator, de Jersey is ready to commit his greatest and final crime. He's going to steal the crown jewels from under the nose of the royals themselves. Now, as Royal Flush prepares for a spectacular run at the Derby, de Jersey faces his moment of truth: How much is he willing to risk to win the sport's most coveted prize? And just how far will he go to get away with the perfect crime? A novel that builds to an amazing crescendo of suspense, Royal Heist is a glamorous and gritty tale of men and women bound together by love, greed, trust, and mistrust. With all the pounding excitement of a high-stakes horse race, this is fiction that takes hold, doesn't let go, and dares us to keep guessing until the very end.

The hover performance of a 27-percent-scale model baseline rotor and advanced rotor with a 3:1 tapered tip (TR3) for the AH-64 attack helicopter was investigated in the rotor test cell at the Langley 14- by 22-foot Subsonic Tunnel as part of ongoing efforts to improve rotorcraft efficiency. The hover performance of the baseline rotor was compared with that of the TR3 rotor and with that of a previously tested advanced rotor with 5:1 tapered tip (TR5). Rotor thrust in hover at a rotor height-to-rotor diameter ratio of 1.46 was varied over a range of thrust coefficients for rotor tip

Mach numbers of 0.63 and 0.57 respectively. The rotor with the TR3 blades had improved hover performance as compared with the rotor with the TR5 blades, and both the TR3 and TR5 blades were superior to the baseline rotor in terms of figure of merit for the range of thrust coefficients from 0.0020 to 0.0100. The additional margin in performance for the TR3 blades as compared with the TR5 blades was likely due to an increase in blade area and Reynolds number at the blade tip region brought about by the change in taper ratio from 5:1 to 3:1.

On March 23, 2004, about 1918:34 central standard time, an Era Aviation Sikorsky S-76A++ helicopter, N579EH, crashed into the Gulf of Mexico about 70 nautical miles south-southeast of Scholes International Airport (GLS), Galveston, Texas. The helicopter was transporting eight oil service personnel to the Transocean, Inc., drilling ship Discoverer Spirit, which was en route to a location about 180 miles south-southeast of GLS. The captain, copilot, and eight passengers aboard the helicopter were killed, and the helicopter was destroyed by impact forces. The flight was operating under the provisions of 14 Code of Federal Regulations Part 135 on a visual flight rules flight plan. Night visual meteorological conditions prevailed at the time of the accident. The National Transportation Safety Board determines that the probable cause of this accident was the flight crew's failure to identify and arrest the helicopter's descent for undetermined reasons, which resulted in controlled flight into terrain. The safety issues discussed in this report focus on terrain awareness and warning systems for helicopters, flight control system training, flight-tracking technology for low-flying aircraft in the Gulf of Mexico, and preflight testing and maintenance checks for cockpit voice recorders. Safety recommendations concerning these issues are addressed to the Federal Aviation Administration.

In this comprehensive aviation manual, Raoul Castro provides a source of invaluable corporate aviation management information. He begins by giving an overview of corporate aviation from its inception, then focuses on the management principles and functions that specifically target corporate aviation. Through the utilization of these sound management principles, Castro facilitates the acceptance of corporate aircraft as indispensable tools of industry. As Castro notes, few companies know how to use corporate aircraft to maximum advantage. Drawing on his expertise and experience, Castro designs a plan by which a company can achieve maximum utilization of an airplane or helicopter fleet. He gives specific instructions on how to facilitate the efficient use of the aviation department of a company, select appropriate aircraft, plan for disasters and establish security measures, fulfill legal requirements of the governmental agencies that regulate the use of aircraft, and manage the maintenance and repair of aircraft. Castro also discusses the scores of details involved in the management of a professional corporate aviation branch and how these details can be handled in a positive, productive manner. After thoroughly examining the overall managerial functions involved in planning, organizing, controlling, and implementing an aviation arm, Castro concludes by discussing the future of corporate aviation. This book is a practical and valuable guide for the executive in charge of an aviation department, an aviation department manager or chief pilot, aspirants to aviation management positions, and both students and teachers of aviation management.
