This book provides trainees in ophthalmology with a complete guide to oculoplasty. Divided into seven sections, the text covers orbit, eyelid, lacrimal system, and ocular tumours. Each topic is explained in a step by step approach describing anatomy, physiology, examination techniques, and surgical techniques. The final sections include histopathology slides, discussion on surgical instruments and suture materials, and a question bank to assist revision. More than 450 images and illustrations further enhance the comprehensive text.

Gas Turbine System Technician (mechanical) 3 & 2 Springer International Arbitration and the COVID-19 Revolution Edited by Maxi Scherer, Niuscha Bassiri & Mohamed S. Abdel Wahab The impact of the COVID-19 pandemic on all major economic sectors and industries has triggered profound and systemic changes in international arbitration.

Moreover, the fact that entire proceedings are now being conducted remotely constitutes so significant a deviation from the norm as to warrant the designation ‘ revolution ’ . This timely book is the first to describe and analyse how the COVID-19 crisis has redefined arbitral practice, with critical appraisal from well-known practitioners of the pandemic ’ s effects on substantive and procedural aspects from the commencement of proceedings until the enforcement of the award. With practical guidance from a variety of perspectives – legal, practical, and sector-specific – on the conduct of international arbitration during the COVID-19 pandemic and beyond, the chapters present leading practitioners ’ insights into the unprecedented and multifaceted issues that arise. They provide expert tips and challenges in such practical matters as the following:

---

preventing and resolving disputes of particular types – construction, energy, aviation, technology, media and telecommunication, finance and insurance; arbitrator appointments; issues of planning, preparation and sample procedural orders; witness preparation and cross-examination; e-signature of arbitral awards; setting aside and enforcement proceedings; and third-party funding. Also included are an empirical survey of users' views and an overview of how the COVID-19 revolution has affected the arbitration rules of leading arbitral seats. With this timely and practical book, arbitration practitioners and scholars will gain up-to-date knowledge of sector-specific challenges brought about by the COVID-19 pandemic and approach arbitration proceedings with an understanding of the most important legal and practical

considerations during the crisis and beyond.

Illustrated Study Guide and Comprehensive Board Review  
Kluwer Law International B.V.

This book contextualizes translational research and provides an up to date progress report on therapies that are currently being targeted in lung cancer. It is now well established that there is tremendous heterogeneity among cancer cells both at the inter- and intra-tumoral level. Further, a growing body of work highlights the importance of targeted therapies and personalized medicine in treating cancer patients. In contrast to conventional therapies that are typically administered to the average patient regardless of the patient's genotype, targeted therapies are tailored to patients with specific traits. Nonetheless, such genetic changes can be disease-specific and/or target specific; thus, the book addresses these issues manifested in the somatically acquired genetic changes of the targeted gene.

---

Each chapter is written by a leading medical oncologist who specializes in thoracic oncology and is devoted to a particular target in a specific indication. Contributors provide an in-depth review of the literature covering the mechanisms underlying signaling, potential cross talk between the target and downstream signaling, and potential emergence of drug resistance.

To Become a God

Walter de Gruyter GmbH & Co KG  
International Arbitration: Law and Practice (Third Edition) provides comprehensive and authoritative coverage of the basic principles and legal doctrines, and the practice, of international arbitration. The book contains a

systematic, but concise, treatment of all aspects of the arbitral process, including international arbitration agreements, international arbitral proceedings and international arbitral awards. The Third Edition guides both students and practitioners through the entire arbitral process, beginning with drafting, enforcing and interpreting international arbitration agreements, to selecting arbitrators and conducting arbitral

---

proceedings, to recognizing, enforcing and seeking to annul arbitral awards. The book is written in clear, accessible language, suited for both law students and non-specialist practitioners, as well as more experienced readers. This highly regarded work addresses both international commercial arbitration and the related fields of investment and state-to-state arbitration and is essential reading for any student of international

arbitration and any practitioner seeking a complete introduction to the field. The Third Edition has been comprehensively updated to include recent legislative amendments, judicial decisions and arbitral awards. Among other things, the book provides detailed treatment of the New York Convention, the UNCITRAL Model Law on International Commercial Arbitration, all leading institutional arbitration rules (including ICC, SIAC, LCIA, AAA and others), the ICSID

---

Convention and ICSID Arbitration Rules, and judicial decisions from leading jurisdictions. The Third Edition is integrated with the author's classic International Commercial Arbitration and with the online Born International Arbitration Lectures, enabling students, teachers and practitioners to explore particular topics in more detail.

About the Author:  
Gary B. Born is the world's leading authority on international arbitration and litigation. He has

practiced extensively in both fields in Europe, the United States, Asia and elsewhere. He is the author of International Commercial Arbitration (Kluwer Law International 3rd ed. 2021), International Arbitration and Forum Selection Agreements: Drafting and Enforcing (Kluwer Law International 6th ed. 2021), International Commercial Arbitration: Cases and Materials (Aspen 3rd ed. 2021) and International Civil Litigation in United States

Taylor & Francis Stereotactic body radiation therapy (SBRT) has emerged as an important innovative treatment for various primary and metastatic cancers. This book provides a comprehensive and up-to-date account of the physical/technological, biological, and clinical aspects of SBRT. It will serve as a detailed resource for this rapidly developing treatment modality. The organ sites covered include lung, liver, spine, pancreas, prostate, adrenal, head and neck, and female reproductive tract.

Retrospective studies and prospective clinical trials on SBRT for various organ sites from around the world are examined, and toxicities and normal tissue constraints are discussed. This book features unique insights from world-renowned experts in SBRT from North America, Asia, and Europe. It will be necessary reading for radiation oncologists, radiation oncology residents and fellows, medical physicists, medical physics residents, medical oncologists, surgical oncologists, and cancer scientists.

Schuster Pathology and Genetics of Skin Tumours is the latest volume in the new WHO series on histological and genetic typing of human tumours. This publication, offers an authoritative and concise reference book, providing an international standard for dermatologists, pathologists and oncologists and will serve as an indispensable guide for use in the design of studies monitoring response to therapy and clinical outcome. Diagnostic criteria, pathological

features, and associated genetic alterations are described in strictly disease-oriented manner. Sections on all WHO-recognized neoplasms and their variants include ICD-O codes, incidence, age and sex distribution, location, clinical signs and symptoms, pathology, genetics, and predictive factors. The book, prepared by more than 150 authors from 20 countries, contains 648 colour photographs, clinical images and charts, and more than 2600 references. This

---

volume covers keratinocytic, melanocytic, appendageal, haematopoietic, soft tissue and neural tumours, as well as inherited tumour syndromes. Each entity is extensively discussed with information on clinicopathological, epidemiological, immunophenotypic and genetic aspects of these diseases. **Handbook of Practical Immunohistochemistry** Kluwer Law International B.V. Amidst growing awareness over the past half century that human activity threatens our natural environment, many of the world's largest cities have played a

role in the sustainability movement, as seen by such initiatives as Day of Cities sponsored by the United Nations. And now local governments in towns and smaller cities are beginning to play a more prominent role in the green movement. This book, inspired by the author's own experience as a citizen activist and local candidate, is a guide for local governments and citizens wishing to launch sustainability campaigns and programs that make a lasting difference in our world. Alexandra Reed Lajoux addresses the popular "green city" topic but focuses on smaller municipalities, which are more numerous than big cities, and in

---

greater need of guidance. With a visionary foreword by Ben G. Price, National Organizer, Community Environmental Legal Defense Fund and author of How Wealth Rules the World, the book discusses the most critical environmental, economic, and engineering realities of municipal life and leadership in our times, ranging from rights of nature, to rollback tax rates, to green infrastructure, to gentrification. It will appeal to a broad range of town or city government employees and elected officials, as well as local activists, contemplating the issues of managing and funding sustainability that all localities worldwide face at some level.

Sweden is one of a handful of countries where the international arbitral process has reached a stage where the jurisprudence is replete with instances involving no local parties at all. Due in all likelihood to this context of especially credible neutrality, the Stockholm Chamber of Commerce (SCC) has emerged as a leading global arbitral institution. Whether the matter at issue is a business transaction dispute or a politicized conflict involving obdurate parties, the richness of its body of decided cases manifests the SCC's authority and reliability

---

throughout the converging world of international arbitration. The present book, written by thirteen eminent practitioners, provides a practical guide to international arbitration in Sweden, whether ad hoc or institutional. Among the many elements of practice and procedure detailed are the following: appointment, challenge, removal, and compensation of arbitrators; use of international legal sources such as IBA guidelines; choice of law by parties; SCC rules and procedures; multiparty arbitrations - joinder, intervention, consolidation; confidentiality; documentary evidence, witnesses, and experts; grounds for setting aside; party succession; Swedish court review of the arbitrator's jurisdiction; and appeal of arbitrators' compensation. In addition, readers will be exposed to a trove of pertinent references to important dispositions that have in recent decades been generated by the stream of major international arbitrations conducted in Sweden. Disputing parties wishing to know what will happen when

Since the publication of the first edition of this best-selling book in 2009, the field of immunohistochemistry has advanced significantly. Fully updated to reflect the latest developments in the field, *Modern Immunohistochemistry, Second Edition*, is a practical guide to all the important diagnostic markers in each organ system. Concise

text is supplemented by over 1,100 high-quality colour images and algorithms. The new edition features even more summary tables, highlighting the key points of differential immunophenotypic panels. A new, expanded introduction explains the basic principles of immunohistochemistry, and chapters have been updated to incorporate predictive/prognostic markers and the latest WHO classifications. All chapters are written by the same

---

expert authors, providing a consistent, engaging style throughout and avoiding contradictory advice. An essential text for residents, this is also an extremely valuable resource for practitioners in anatomic pathology wishing to familiarise themselves with diagnostic markers at a quick glance.

This open access book discusses the eroding economics of nuclear power for electricity generation as well

as technical, legal, and political acceptance issues. The use of nuclear power for electricity generation is still a heavily disputed issue. Aside from technical risks, safety issues, and the unsolved problem of nuclear waste disposal, the economic performance is currently a major barrier. In recent years, the costs have skyrocketed especially in the European countries and North America. At the same time, the costs of alternatives such as photovoltaics

Catalog BRILL

In a conceptually current, quick-reference, Question & Answer format, the second edition of Handbook of Practical Immunohistochemistry : Frequently Asked Questions continues to provide a comprehensive and yet concise state-of-the-art overview of the major issues specific to the field of

immunohistochemistry. With links to the authors Immunohistochemical Laboratory website, this volume creates a current and up-to-date information system on immunohistochemistry. This includes access to tissue microarrays (TMA) of over 10,000 tumors and normal tissue to validate common diagnostic panels and provide the best reproducible data for diagnostic purposes. Fully revised and updated from the first edition, the new features of the second edition include over 200 additional questions or revised questions with an IHC panel to answer each question;

---

over 250 new color photos and illustrations; over 20 new useful biomarkers; hundreds of new references; several new chapters to cover phosphoproteins, rabbit monoclonal antibodies, multiplex IHC stains, overview of predictive biomarkers, and integration of IHC into molecular pathology; many new coauthors who are international experts in a related field; many updated IHC panels using Geisinger IHC data collected from over 10,000 tumors and normal tissues; and updated appendices containing detailed antibody information for both manual and automated staining procedures.

Comprehensive yet practical and concise, the Handbook of Practical Immunohistochemistry: Frequently Asked Questions, Second Edition will be of great value for surgical pathologists, pathology residents and fellows, cytopathologists, and cytotechnologists.

*Popular Photography*  
BRILL  
Evidence from Shang oracle bones to memorials submitted to Western Han emperors attests to a long-lasting debate in early China over the proper relationship between humans and

---

gods. One pole of the debate saw the human and divine realms as separate and agonistic and encouraged divination to determine the will of the gods and sacrifices to appease and influence them. The opposite pole saw the two realms as related and claimed that humans could achieve divinity and thus control the cosmos. This wide-ranging book reconstructs this debate and places within their contemporary contexts the rival claims concerning the nature of the cosmos and the

spirits, the proper demarcation between the human and the divine realms, and the types of power that humans and spirits can exercise. It is often claimed that the worldview of early China was unproblematically monistic and that hence China had avoided the tensions between gods and humans found in the West. By treating the issues of cosmology, sacrifice, and self-divinization in a historical and comparative framework that attends to the contemporary

---

significance of specific arguments, Michael J. Puett shows that the basic cosmological assumptions of ancient China were the subject of far more debate than is generally thought. *The Un-private House* Kluwer Law International B.V. This volume offers a detailed and comprehensive analysis of Endocrine Disrupting Chemicals (EDCs), covering their occurrence, exposure to humans and the mechanisms that lead to the pathogenesis of EDCs-induced metabolic disorders. The book is divided into three parts. Part I describes the

physiology of the human endocrine system, with special emphasis on various types of metabolic disorders along with risk factors that are responsible for the development of these disorders. Part II addresses all aspects of EDCs, including their role in the induction of various risk factors that are responsible for the development of metabolic disorders. Part III covers up-to-date environmental regulatory considerations and treatment strategies that have been adopted to cure and prevent EDCs-induced metabolic disorders. This section will primarily appeal to clinicians

---

investigating the causes and treatment of metabolic disorders. The text will also be of interest to students and researchers in the fields of Environmental Pharmacology and Toxicology, Environmental Pollution, Pharmaceutical Biochemistry, Biotechnology, and Drug Metabolism/Pharmacokinetics.
