This innovative lab was developed as part of an NSF cyberlearning grant to SimBio. It uses an engaging simulated disease system and instant personalized feedback to help students overcome confusions and provide reinforcement on how to design experiments and to summarize and interpret results.

This popular laboratory explores basic population biology concepts including exponential and logistic growth and carrying capacity. It is based on the textbook example of a predator-prey system involving wolves and moose on an island in Lake Superior. Students start out by characterizing the growth of a colonizing population of moose in the absence of predators.

Simulation-based virtual labs and interactive chapters for ecology, evolution and genetics. We believe that students learn science by doing science. SimBio's modules engage students in

the scientific process as they discover key concepts via experimentation using realistic simulations of biological systems.

When the Isle Royale lab opens, you will see several panels: The ISLAND VIEW panel (upper left section) shows a bird's eye view of northeastern Isle Royale, which hosts ideal moose habitat. The DATA & GRAPHS panel to the right displays a graph of population sizes of moose and wolves through time. Over two decades ago, our EcoBeaker® ecology labs first revolutionized the teaching of ecology using simulated experiments. Now, over 100,000 students each year explore and learn basic and advanced ecological concepts using SimBio Virtual Labs and our new Interactive Chapters.

While all of our labs have some open-ended exercises, the more directed structure of the 101 Collection labs has made them especially popular for larger classes (where grading can be

challenging) and for homework assignments. Some SimBio Interactive Chapters are also suitable for introductory classes. Looking for something specific?

All of the modules listed below explore evolutionary topics. Most of the labs are built around classic study systems and work well both in place of traditional "wet" labs, or as homework assignments. Darwinian Snails, Sickle-Cell Alleles, Mendelian Pigs, and Evolutionary Evidence are particularly popular in introductory-level courses.
