"The requirements for this
study were: to identify how

the available Training Aids, Devices, Simulators and Simulations (TADSS) are integrated into training programs, to evaluate user perceptions of TADSS, and to provide recommendations for a procedure to periodically gather this information. The methodology employed structured interviews given at eight posts selected for both Forces Command (FORSCOM) and Training and Doctrine Command (TRADOC) installations. Personnel were selected to represent the providers of TADSS and the users, from individual soldier to training administrator. Virtual Simulation was employed by the combat maneuver arms where available. Constructive Simulation is widely used by companies and battalions and not often by platoons.

The TADSS most often used at platoon level was the multiple integrated laser engagement system or MILES. MILES was not consistently employed in a manner that would ensure realism or objective casualty assessment. Unit Conduct of (UCOFT) and Weaponeer are the simulators most often used. The Standard Army Training System (SATS) is used mostly to prepare training schedules, but the software is unfriendly and needs considerable revision to reach its full potential. TADSS information should be collected on a periodic basis by TRADOC using a modified set of these study procedures."--DTIC. Army Logistician Irwin Professional Pub
Excellent study examines lives and work of American cabinetmakers, silversmiths, pewterers, printers, painters,

blacksmiths, and many other artisans, before 1775. "A fascinating study." — The New Yorker. 18 illustrations.

Integrating and Extending Microsoft Office XP Irwin Professional Pub

The I-Series Applications textbooks strongly emphasize that students learn and master applications skills by being actively engaged- by doing. These texts have been written with clear, error-free, and unambiguous steps to accomplish tasks that lead to a finished document, worksheet or database table. The authors made the decision that teaching "how" to accomplish some task is not enough for complete understanding and mastery. Prior to introducing steps, the authors discuss why the steps students are about to experience are important and what role the steps play in the overall plan for creating a document, workbook or database.

Army RD & A. Irwin/McGraw-Hill

This report describes the development of the Reserve Component Virtual Training Program (RCVTP) for training U.S. Army National Guard (ARNG) armor-units using the simulation technologies of Simulation Networking (SIMNET), Janus, and an automated tactical operations center simulator called the Commander/Staff Trainer (C/ST). The report presents the project's background, including the conceptualization of the RCVTP by the contracting agency, the U.S. Army Research Institute for the Behavioral and Social

Sciences (ARI), and the contractor team's proposal for operationalizing ARI's conceptualizations. Three of the major goals of the RCVTP are to emphasize execution, to compress training time, and to reduce training management by providing a turn-key program for the ARNG. The report summarizes the design and development of the RCVTP's platoon-, company-, and battalion-level exercises and their training management materials. Significant design issues discussed include identifying tasks appropriate for training in designated simulated environments and incorporating specified design concepts through the process of outlining the training exercises. The development of the exercises and the training management materials is discussed in light of their relationship to the design principles and in terms of their relevance to the final RCVTP product. The report describes the formative evaluation and presents findings in the context of the developmental framework. Finally, the report documents the process of extending the developmental methodology through the creation of cavalry troop exercises and identifies lessons learned. (AN).

DIANE Publishing

The complete digital solution for computer applications and concepts. SimNet XPert works great as both a standalone product or as a supplement to a McGraw-Hill/Irwin or

McGraw-Hill/Microsoft Press title. Contact your sales representative for more details! SimNet is McGraw-Hill's industry-leading applications training tool that provides live, context-based assessment as students work. Using a realistic facsimile of the actual Office application environment, the program guides students through the tasks and skills necessary to make them fully fluent in Microsoft Office. A Tutorial mode even provides a brief lesson in the skill before encouraging students to try it for themselves. This is the most realistic and comprehensive Office training product on the market today.

The Colonial Craftsman
McGraw-Hill Technology Education

An introduction to Windows XP, which seeks to enhance critical thinking skills and provide students with complete application coverage. There are Feature, Method and Practice boxes to prepare students for skills assessment, and end-of-chapter exercises and reviews.

SimNet Concepts Release 1.5 has been revised to include page correlations for new MHTC computer concepts textbooks:
Computing Concepts-Haag, Computing Essentials-O'Leary, Computing Today-O'Leary, & Using Information Technology-Sawyer. It includes interactive "labs" for 77 different computer concepts in the Learning Component, and 160 corresponding assessment questions in the Assessment Component.

Microsoft Access 2002 Irwin Professional Pub
SimNet MIS is a new computer-based tutorial program for the Management Information Systems course (MIS). It is based on McGraw-Hill's award-winning SimNet Xpert but has had 14 new features developed expressly for the MIS

course. SimNet MIS is designed to work perfectly alongside any McGraw-Hill MIS textbook. When this valuable tool is used in conjunction with a MIS textbook, students benefit by having a learning device that allows them to practice and study their skills at home or in the school lab, at their own pace.

The Advantage Series presents the Feature-Method-Practice approach to computer software applications to today's technology and business students. This series implements an efficient and effective learning model, which enhances critical thinking skills and provides students and faculty with complete application coverage.
Current Issues in IT Education Irwin Professional Pub

SimNet Xpert Version 3 is the newest edition of our simulated Office XP assessment and learning tool. Version 3 contains: Applications, Windows 2000, Computer Concepts, FrontPage, Office XP Integration, IE 6.0 and Windows XP. It allows students to study MS Office XP skills and professors to test and evaluate student's proficiency within MS Office XP applications. Students can practice and study their skills at home or in the

school lab using SimNet Xpert Version 3, which does not require the purchase of Office XP software.
