Discover Automation Anywhere best practices and strategies for building scalable automation solutions for your organization Key FeaturesBuild RPA robots using the latest features of cloud-based Automation Anywhere A2019Explore real-world scenarios with AA A2019 to understand the wide range of capabilities available for your RPA projectsBuild complete software robots to automate business processes with the help of step-by-step walkthroughsBook Description With an increase in the number of organizations deploying RPA solutions, Robotic Process Automation (RPA) is quickly becoming the most desired skill set for both developers starting their career and seasoned professionals. This book will show you how to use Automation Anywhere A2019, one of the leading platforms used widely for RPA. Starting with an introduction to RPA and Automation Anywhere, the book will guide you through the registration, installation, and configuration of the Bot agent and Control Room. With the help of easy-to-follow instructions, you'll build your first bot and discover how you can automate tasks with Excel, Word, emails, XML, and PDF files. You'll learn from practical examples based on real-world business scenarios, and gain insights into building more robust and resilient bots, executing external scripts such as VBScripts and Python, and adding error handling routines. By the end of this RPA book, you'll have developed the skills required to install and configure an RPA platform confidently and have a solid understanding of how to build complex and robust, yet performant, bots. What you will learnExplore effective techniques for installing and configuring an Automation Anywhere A2019 platformBuild software robots to automate tasks and simplify complex business processesDesign resilient bots that are modular and reusableUnderstand how to add error handling functionality and discover troubleshooting techniquesDesign bots to automate tasks in Excel, Word, emails, XML, and PDF filesImplement effective automation strategies using RPA best practicesWho this book is for This Automation Anywhere RPA book is for automation engineers, RPA professionals, and automation consultants who are looking to explore the capabilities of Automation Anywhere for building intelligent automation strategy for enterprises. A solid understanding of programming concepts and exposure to the Automation Anywhere platform is necessary to get started with this book.

You're getting married! What an exciting and fun time! Everything is such a whirlwind and you hardly know how to contain your excitement. In addition, there's all that needs to be done! How is it possible to keep track of everything and make sure nothing gets left out? Well, here's just exactly how to do that! This wedding planner is perfect for the bride and groom to use to know exactly what's been done, what's planned and what still needs to be done. It is a full 8 1/2" by 11" so you have plenty of room to write everything you need to keep track of! Major sections of this planner of 112 pages are: -Specifics, such as date, time, and venue -Budget information -Tasks to complete 12 months, 9 months and 3 months before -More detailed information on 1 month, 1 week and 1 day before -and, of course The Big Day! There is also a place to organize information about the engagement party, bridal shower and the Stag and Doe parties and the Rehearsal ceremony, dinner and recption after the wedding. There's a place to record detailed information about the wedding attendants for both the Bride and Groom, and a section for photographer, videographer, DJ, florist, bakery, hair and nail sculptors, and caterer information. In addition there is a place to keep track of honeymoon venues. A separate menu planner allows you to keep track of all the suppliers and foods involved. There's also room for a very extended guest list, both for the Bride's side and the Groom's side. And finally, there's a table schematic so you can decide and record seating arrangements for the reception. There are ten pages for Notes and Details, in case there's anything forgotten! There's not anything left to chance in this wedding planner, so you can feel comfortable that you will be starting your new life as a couple on the right feet! This makes a wonderful gift, also, for any bride and groom-to-be. Be sure to get yours (and your gifts) before the big wedding season begins! You will be so glad you did!

The idea of survival is a recurrent theme in discussions both of family and of art. Whether understood in physical, mental, or spiritual terms, it is inextricable from the most basic questions of human existence, encompassing the ways in which individual experience can persist after death. Questions of survival and immortality are thus central for understanding the artistically expansive family at the center of this volume: Alice Lok Cahana, a Holocaust survivor and painter; her son Rabbi Ronnie Cahana, a writer and stroke survivor; and his daughter Kitra Cahana, a photographer who embeds herself in communities in order to tell their stories. Complemented with fascinating essays that provide powerful insights into memory and trauma, this beautifully illustrated book interweaves powerful accounts of these three artists with a complex story of human experience, legacy, and meaning.

This new, third edition of Meta-States takes you on a journey to the theoretical background, understandings, and constructions of the Meta-States model itself. The aim is to fully locate Meta- States in the field of the cognitive-behavioral sciences as it establishes the emergent field of Neuro-Semantics. Meta-States is not just a model about how you think, feel, relate, act and speak, it is also a different way of thinking about the way you function as a human being. Understanding your own meta-states within this model of self-reflexive consciousness is to enter into a non-linear way of thinking and feeling. The Meta-States Model opened up a new dimension to NLP and launched the field of Neuro-Semantics It is likely that this work will open up an entirely new domain in NLP and offer a new synthesis between NLP and General Semantics. The hardcover edition of this title [1890001341] is now out of print.

Your students will be able to install, troubleshoot, and test electrical motors like the pros! UNDERSTANDING MOTOR CONTROLS, 2ND Edition uses a real-world systems approach to learning motor control devices. Starting with basic control circuits and components, this book covers all must-know applications and procedures to ensure reader success in the more complex topics. From development and installation to testing and troubleshooting, UNDERSTANDING MOTOR CONTROLS, 2ND Edition prepares future industrial electricians with a solid foundation in basic control circuits, sensing devices, solid-state controls, variable speed drives, programmable logic controllers (PLCs), and more. The rapid advancement of digital multimedia technologies has not only revolutionized the production and distribution of audiovisual content, but also created the need to efficiently analyze TV programs to enable applications for content managers and consumers. Leaving no stone unturned, TV Content Analysis: Techniques and Applications provides a detailed exploration of TV program analysis techniques. Leading researchers and academics from around the world supply scientifically sound treatment of recent developments across the related subject areas—including systems, architectures, algorithms, applications, research results, emerging approaches, and open issues. The book is organized into six parts: Content Extraction - deals with automatic analysis and annotation of TV content, addressing generic semantics and concepts as well as TV content Content Structuring - examines techniques for identifying interesting parts of TV programs and supplying direct access to it Content Recommendation - explores the problem of providing users with the most relevant content, addressing the problem of an ever-increasing amount of available content Content Quality - considers visual perception and quality approaches in the multi-display TV context and the specific mobile TV scenario Web and Social TV - presents studies on Web and TV convergence and on how user-generated content in Web 2.0 applications can be used to enhance services Content Production - covers postproduction, visual effects, and presentation standards Most parts start with a chapter that provides an overview of that area, followed by state-of-the-art approaches focusing on specific issues covered in that section. Reporting on recent advances in the field, the book provides you with the global view and up-to-date understanding of emerging trends needed to participate in the development of the digital TV domain.

A History of Australian Computing John Wiley & Sons
In this new installation of his work, William E. Connolly examines entanglements between volatile earth processes and emerging cultural practices, highlighting relays among extractive capitalism, self-amplifying climate processes, migrations, democratic aspirations, and fascist dangers. In three interwoven essays, Connolly takes up thinkers in the "minor tradition" of European thought who, unlike Cartesians and Kantians, cross divisions between nature and culture. He first offers readings of Sophocles and Mary Shelley, asking whether close attention to the Anthropocene could perhaps have arrived earlier had subsequent humanists absorbed their lessons. He then joins Deleuze and Guattari's notion of an abstract machine with contemporary earth sciences, doing so to compare the Antique Little Ice Age of the late Roman empire to contemporary relays between extractive capitalism and accelerating climate processes. The final essay stages a dramatic dialogue between Alfred North Whitehead and Michel Foucault about the pursuit of truth during a time of planetary turbulence. With Climate Machines Fascist Drives, and Truth, Connolly forges incisive interventions into key issues of our time.

During the first two years of World War I a German general called from obscure retirement, Paul Von Hindenburg, aided by his deputy, Erich Ludendorff, won imperial fame from his successful campaigns on the eastern front. In 1916 Kaiser Wilhelm named Hindenburg to head the all-powerful Great German Staff with Ludendorff his deputy. At first all went well. But as food and other resources including replacements diminished, and as America entered the war, the top command increasingly panicked. In the summer of 1918 German armies in the west opened an all-out defensive. This failed and German surrender followed-as did the fall of the German empire.

This project-oriented facilities design and material handling reference explores the techniques and procedures for developing an efficient facility layout, and introduces some of the state-of-the-art tools involved, such as computer simulation. A "how-to," systematic, and methodical approach leads readers through the collection, analysis and development of information to produce a quality functional plant layout. Lean manufacturing; work cells and group technology; time standards; the concepts behind calculating machine and personnel requirements, balancing assembly lines, and leveling workloads in manufacturing cells; automatic

identification and data collection; and ergonomics. For facilities planners, plant layout, and industrial engineer professionals who are involved in facilities planning and design.

Totally Integrated Automation is the concept by means of which SIMATIC controls machines, manufacturing systems and technical processes. Taking the example of the S7-300/400 programmable controller, this book provides a comprehensive introduction to the architecture and operation of a state-of-the-art automation system. It also gives an insight into configuration and parameter setting for the controller and the distributed I/O. Communication via network connections is explained, along with a description of the available scope for operator control and monitoring of a plant. As the central automation tool, STEP 7 manages all relevant tasks and offers a choice of various text and graphics-oriented PLC programming languages. The available languages and their respective different features are explained to the reader. For this third edition, the contents of all sections of the book have been revised, updated and the new data communications with PROFINET IO have been added. The STEP 7 basic software is explained in its latest version. The book is ideal for those who have no extensive prior knowledge of programmable controllers and wish for an uncomplicated introduction to this subject.

The process of realizing the ground state of some typical (frustrated) quantum many-body systems, starting from the 'disordered' or excited states, can be formally mapped to the search of solutions for computationally hard problems. The dynamics through the critical point, in between, are therefore extremely crucial. In the context of such computational optimization problems, the dynamics (of rapid quenching or slow annealing), while tuning the appropriate elds or uctuations, in particular while crossing the quantum critical point, are extremely intriguing and are being investigated these days intensively. Several successful methods and tricks are now well established. This volume gives a collection of introductory reviews on such developments written by well-known experts. It concentrates on quantum phase transitions and their dynamics as the transition or critical points are crossed. Both the quenching and annealing dynamics are extensively covered. We hope these timely reviews will inspire the young researchers to join and c- tribute to this fast-growing, intellectually challenging, as well as technologically demanding eld. We are extremely thankful to the contributors for their intensive work and pleasant cooperations. We are also very much indebted to Kausik Das for his help in compiling this book. Finally, we express our gratitude to Johannes Zittartz, Series Editor, LNP, and Christian Caron of physics editorial department of Springer for their encouragement and support.

The human life alternates between the great, external macrocosm and the invisible inner microcosm. Steiner discusses the various paths of self-development that lead across these two thresholds and to the transformation of human soul-forces into spiritual organs of perception. A brief synopsis: The world behind the tapestry of sensory perceptions; human life between macrocosm and microcosm. The planets and their connection with our sleeping and waking life; consciousness soul, mind soul, and sentient soul. The inner path of the mystic; the cycle of the year; the ability to see through matter; the "greater guardian of the threshold." The nature and development of human soul faculties; the "lesser guardian of the threshold"; the sun at midnight; the results of "sins of omission." The Egyptian mysteries of Osiris and Isis; initiation experiences; the Rosicrucian path; mystics of the Middle Ages. Initiation in the "northern mysteries"; the necessity of suppressing the ego; conscious assent into the macrocosm and the higher worlds; the world of archetypal images. The four spheres of the higher worlds; the threshold of the spirit world; forces for developing clairvoyant consciousness in the world of archetypal images. The macrocosm mirrored in the human being; the nervous system as an inner solar system; the image of purified blood and the conquest of our lower nature in the symbol of the Rose Cross. Spiritual organs of perception and the strengthening powers of sleep; the thinking of the heart; the ego viewed from twelve perspectives. Reading the akashic record; the transition from intellect to heart thinking; four-dimensional space; intellectual questions have no meaning in relation to conditions before the intellect itself existed. Human and planetary evolution; adaptation to the different states of Earth's existence; the breathing process should not be influenced directly unless knowledge has become prayer.

This brilliantly conceived book, written by two of the leading theorists of NLP, explores the ability to shift levels of perception. Redefining the importance of "submodalities," it both updates and extends the traditional NLP model, presenting six sub-models constructed around the six meta-level phenomena: believing, valuing, negating, foregrounding, understanding and reframing. This book causes readers to re-examine many of their core beliefs concerning the existing models of NLP and challenges them to update them with fundamentally new thinking.
