Simple harmonic motion is a type of oscillatory motion in which the displacement  $x$  of the particle from the origin is given by  $x = A \sin(\omega t + \phi)$  where  $A$ ,  $\omega$ , and  $\phi$  are constants. This kind of motion where displacement is a sinusoidal function of time is called simple harmonic motion.

### Simple Harmonic Motion- with Examples, Problems, Visuals...

Simple harmonic motion occurs when the force on an object is proportional and in the opposite direction to the displacement of the object. Examples include masses on springs and pendula, which 'bounce' back and forth repeatedly. Mathematically, this can be written:  $F = -kx$   $\{\displaystyle F=-kx\}$ ,
