Simple Solutions: For Planet Earth is a scientific book written in a popular style for the average reader. You have read about Peak Oil and Global Climate Warming, and complained about \$4/gallon gasoline, but how really serious are these headlines and annoyances? The author has worked his

entire career on: the science, technology, education, administration and politics of these subjects, and crystallizes this complex field into understandable elements, providing simple solutions for humanity. Does it make sense for the renewable energy budget of the Federal Government to be about \$1 billion/year when:

- o Annual tax incentives and government programs for the oil industry are supposedly in the range between \$38 billion and \$115 billion, although Lester Brown says \$210 billion in 2005.
- o Farm subsidies alone in 2004 cost taxpayers \$16.2 billion.
- o Our country spends \$12 billion a month, or \$144 billion/year, on the Iraq and Afghanistan wars, ostensibly to protect oil, only to raise prices.

The author's long experience with the Greenhouse Effect has led him to believe that methane, not carbon dioxide, could well be the critical gas of concern, for there is

potential for global warming to cascade into, what he terms, the Venus Syndrome. The closing chapter speculates on a hypothesis regarding mega-tsunamis (100 meter waves) from landslides. While simple solutions are suggested, the problem is the inability of our civilization to agree on a workable strategy, which is further weakened by the lack of will on part of the general populace. Thus, the reader is urged to help make that crucial difference. Instructions and examples are provided on how to attain Rainbow Vision to carry out this mission for a better Planet Earth. The simplest solution is for everyone to join in on the effort.

Against the backdrop of World War II tragedy and devastation in Latvia, Poland and Germany and three decades of European history,

this true narrative provides a window into the palpating heart of wartime upheaval through the lives of Rolf Dutzmann and Lilo Wassull—two people fatefully positioned "on the other side." In December of 1939, swept along on a tide of dire necessity and circumstance due to the imminent Soviet takeover of his homeland, Rolf, a young Latvian aeronautical engineering student, flees with his family to Germany, a country fully under Hitler's control and already engaged in a brutal war. While the account chronicles Rolf's pursuit of his technical dream against daunting wartime odds, it is first and foremost a poignant love story that plays out against a panorama of worldwide chaos and destruction. It is also a story of the seen and unseen forces that coalesce to keep Rolf and Lilo alive after they meet in 1940 Berlin, leading them through a chain of cataclysmic events including Rolf's draft into the Luftwaffe and his father's assignment as chief inspector of V-2 rocket production; the bombing of Berlin; the destruction of their homes; their numerous desperate, cross-country escapes from the bombing, the advancing Soviet troops from the east,

---

and other Allied forces from the west; the POW camp hardships; and the deprivation of the postwar years. Despite the immeasurable evil, suffering and desolation of World War II, a synchronistic chain of events provides an uplifting reminder that love and hope may take wing even out of the ashes of life's most terrifying adversities.
