field into deterministic and probabilistic (nondeterministic, stochastic) subfields. This division can be seen by reading the contents page of just about any OR/MS textbook. The mathematical models that help to define OR/MS are usually presented in terms of one subfield or the other. This separation comes about somewhat artificially: academic courses are conveniently subdivided with respect to prerequisites; an initial overview of OR/MS can be presented without requiring knowledge of probability and statistics; text books are conveniently divided into two related semester courses, with deterministic models coming first; academics tend to specialize in one subfield or the other; and

practitioners also tend to be expert in a single subfield. But, no matter who is involved in an OR/MS modeling situation (deterministic or probabilistic - academic or practitioner), it is clear that a proper and correct treatment of any problem situation is accomplished only when the analysis cuts across this dichotomy.

 Three years ago, the first Liquid Legal book compelled the legal profession to reassess its identity and to aspire to become a strategic partner for corporate executives as well as for clients. It also led to the foundation of the Liquid Legal Institute (LLI) - an association that sparks innovation and drives collaboration in the legal industry. This second Liquid Legal book builds on the LLI's progress and on the lessons learned by a legal community that has moved beyond focusing purely on LegalTech. It not only presents an outlook on how legal professionals will operate in the future, but also allows readers to develop a genuine understanding of the value of digitalization, standardization and new methodologies. Further, the book outlines a Common Legal Platform (CLP) and makes it the common point of departure for every author, offering inspiring insights from a wide range of forward-thinking experts who are all invested in driving new thinking within the legal ecosystem. The book also features "Liquid Legal Waves," which provide links between the various articles,

connecting concrete ideas, practical solutions and specific topics and putting them into perspective, and so creating a true network of ideas for readers. A must read, this book is vibrant proof of the power of sharing, collaboration and coopetition, helping the legal profession to shape its digital future and revitalize its relevance while retaining a focus on the human lawyer.
