This ground-breaking book aims to take a new and innovative view on how disability and architecture might be connected. Rather than putting disability at the end of the design process, centred mainly on compliance, it sees disability – and

ability – as creative starting points for the whole design process. It asks the intriguing question: can working from dis/ability actually generate an alternative kind of architectural avant-garde? To do this, *Doing Disability Differently*: explores how thinking about dis/ability opens up to critical and creative investigation our everyday social attitudes and practices about people, objects and space argues that design can help resist and transform underlying and unnoticed inequalities introduces architects to the emerging and important field of disability studies and considers

what different kinds of design thinking and doing this can enable asks how designing for everyday life – in all its diversity – can be better embedded within contemporary architecture as a discipline offers examples of what doing disability differently can mean for architectural theory, education and professional practice aims to embed into architectural practice, attitudes and approaches that creatively and constructively refuse to perpetuate body 'norms' or the resulting inequalities in access to, and support from, built space. Ultimately, this book suggests that

re-addressing architecture and disability involves nothing less than re-thinking how to design for the everyday occupation of space more generally.

Originally devised as a guide for converting from imperial to metric measurements, 'The Metric Handbook' has since been totally transformed into a major international handbook of planning and design data. The second edition has been completely updated, with most chapters being totally rewritten, to meet the needs of the modern designer. The book contains nearly 50 chapters dealing with all the principal building types from airports, factories and warehouses, offices shops and hospitals, to schools, religious buildings and libraries. For each building type 'The Metric Handbook' gives the basic design requirements and all the principal dimensional data. Several chapters deal with general aspects of building such as materials, lighting, acoustics and tropical design. There are also sections on general design data, including details of human dimensions and space requirements. It is a unique authoritative reference for solving everyday planning problems. In its various editions it has sold over 100,000 copies

worldwide, and continues to be a reference work belonging on every design office desk or drawing board.

The ARE Sketches(tm) were born out of my journey to become a licensed architect and the study process I used by turning written verbiage into sketches for visual understanding. They have been shared online with others testing for their license as well as with those who simply enjoy learning about architecture. This book is whatever you want it to be. A flipbook of cool sketches. A visual study guide. A way for you to learn more about architecture. Each sketch provides a nugget of information in bite-size form, perfect for reading at your own pace with your own breaks. Write in the margins. Sketch in the blank space (there's purposefully room for that). Sketch on top of my sketches. Share it with a friend. Most of all, enjoy this wonderful world of architecture. This is the second in what will be a six part series of visual study materials for the ARE (Architect Registration Exams), covering mainly Site Planning & Design - with overlap to other tests. I get a handful of emails each week from people just like you,

working hard towards getting their license. I love hearing from them and I love being able to help. That is the root of where this book was born - because a young licensed architect empowered to make the world better is a positive in my book.
