On a Saturday morning in December 1973, a section of New York's West Side Highway collapsed under the weight of a truck full of asphalt. The road was closed, seemingly for good, and the 80,000 cars that traveled it each day had to find a new way to their destinations. It ought to have produced traffic chaos, but it didn't. The cars simply vanished. It was a moment of revelation: the highway had induced the demand for car travel.

It was a classic case of "build it and they will come," but for the first time the opposite had been shown to be true: knock it down and they will go away. Samuel I. Schwartz was inspired by the lesson. He started to reimagine cities, most of all his beloved New York, freed from their obligation to cars. Eventually, he found, he was not alone. Since the turn of the twenty-first century, a surreptitious revolution has taken place: every year Americans are driving fewer miles. And the generation named for this new century -- the Millennials -- are driving least of all. Not because they can't afford to; they don't want to. They have better ideas for how to use their streets. An urban transformation is underway, and smart streets are at the heart of it. They will boost property prices and personal fitness, roll back years of congestion and smog, and offer a transformative experience of American urban life. From San Francisco to Salt Lake, Charleston to Houston, the American city is becoming a better and better place to be. Schwartz's Street Smart is a dazzling and

affectionate history of the struggle for control of American cities, and an inspiring off-road map to a more vibrant, active, and vigorous urban future.

Hans Litten is one of the most celebrated lawyers in Berlin, famed for his brilliant mind and the rhetorical flair with which he defends those fighting back

Dust Explosions in the Process Industries John Wiley & Sons
The country's leading transport expert describes how the driverless vehicle revolution will transform highways, cities, workplaces and laws not just here, but across the globe. Our time at the wheel is done. Driving will become illegal, as human drivers will be demonstrably more dangerous than cars that pilot themselves. Is this an impossible

future, or a revolution just around the corner? Sam Schwartz, America's most celebrated transportation guru, describes in this book the revolution in self-driving cars. The ramifications will be dramatic, and the transition will be far from seamless. It will overturn the job market for the one in seven Americans who work in the trucking industry. It will cause us to grapple with new ethical dilemmas- if a car will hit a person or a building, endangering the lives of its passengers, who will decide what it does? It will further erode our privacy, since the vehicle can relay our location at any moment. And, like every other computer-controlled device, it can be vulnerable to hacking. Right now, every major car maker here and abroad is working on bringing autonomous vehicles to consumers. The fleets are getting ready to roll and nothing will ever be the same, and this book shows us what the future has in store.
