Stories are a powerful means to promote cooperation and to teach many things and user stories, as we know, are no exception to this condition.

The user stories allow you to create a link between the users or consumers and the product developers. This relationship is the first major step towards the creation and achievement of the pinnacle of admirable products, which positively influence the people who use or consume them and even change them to improve their lifestyle. This book is a compilation of many previous articles the authors published on their blogs and other specialized sites: Learned lessons (<http://www.lecciones-aprendidas.info/>)

Gazafatonario (<http://www.gazafatonario.it.com/>) All this added to totally new material and numerous practical examples that enrich and extend the original work. In this, the

anatomy of user stories is described in detail, the meaning of each of the INVEST attributes is intensely addressed and different patterns are treated to divide stories, with illustrative lessons. It also raises different ways of representing a user story, emphasizing that the most representative of this instrument are the conversations that it fosters. The underlying message is that the stories are to tell them, not to write them. In the final part, the authors present a Canvas to Talk about User Stories, a visual tool to document different aspects or dimensions of new or existing user stories in the product backlog. As the authors say in the foreword, they present some of the ways of doing things when it comes to user stories, it is a view, supported by their experience of many years not only in projects and development efforts with Agile and Lean thinking, but with other approaches and methods that at this point are considered traditionalists. In any case, the motivation for continuous improvement is present throughout the book and that is perhaps the only certainty left by its author. Lean Enterprise Institute When the flood waters of Hurricane Katrina receded around New Orleans, they revealed unimaginable destruction and a traditional disaster recovery process that was Byzantine, costly, and far too slow for the victims who just wanted to get home. Getting Home is the inspiring story of a defense lawyer and a school teacher who left their careers to rebuild homes for desperate survivors but wound up reconstructing the entire process for rebuilding after disasters. Authors Liz McCartney and Zack Rosenberg describe how SBP, the disaster relief nonprofit they founded, partnered with Toyota to apply the lean principles of the Toyota Production

System to rebuild homes and lives following hurricanes, tornadoes, and floods throughout the U.S. and its territories. For lean thinkers, this story offers a fresh look at lean tools being used in non-traditional settings. With a short-term volunteer workforce, a layer of middle management that turns over every 10 months, and constantly shifting sources of income, SBP seemed like it could never escape a constant cycle of emergencies and triumphs. Using lean tools, however, Liz and Zack got their work processes under control and found the time to think deeply about the nature of disasters and rebuilding and found themselves with a clearer mission. The book also details an innovative, 9-step blueprint for how private industry, relief agencies, volunteers, and all levels of government can work together to dramatically shrink the time between when disasters hit and victims get home in a prompt, efficient, and predictable way. \_\_\_ "In these pages, you will read and be inspired by the spirit of a defense lawyer and a school teacher who left

their careers to rebuild homes for the most desperate survivors of Hurricane Katrina in New Orleans. What Liz McCartney and Zack Rosenberg quickly discovered about this work is that the duration of time between disaster and recovery inflicts an immense toll on people. They were determined to do better and Toyota wanted to help. By sharing the Toyota Production System with SBP, we helped them reduce the home rebuilding time by about 50%." - Jim Lentz, CEO, Toyota Motor North America, Inc
