The evidence that more CO causes warming 2 • The extra CO in the atmosphere amplified the original warming. That 's the positive feedback. • The extra CO mixed through the atmosphere, spreading greenhouse warming across the globe. The ice core record is entirely consistent with the warming effect of CO . In fact, the dramatic warming

A startling book that reshapes the debate about global warming and offers a moderate approach to meeting its challenges. Bjorn Lomborg argues that many of the elaborate and expensive actions now being considered—the Kyoto Protocol, for example—have a staggering potential cost of hundreds of billions of dollars, but, ultimately, will have little impact on the world's temperature.

those skeptical about the severity of future warming. These are: Humans are responsible for increasing CO 2 The effects of CO 2 in the atmosphere were first established in 1850. Radiative physics shows us that a doubling of CO 2 would raise global temperatures by at least 1.80 Celsius. More warming than this is possible but how much is uncertain.

Global warming skeptics also believe the models used to predict Earth's future under global warming are unreliable. They feel that while the sun, clouds, gases, glaciers and oceans are responsible for weather, so, too, are other factors, including some we don't currently understand. According to global warming skeptics, computer models are merely a guess at what will happen on Earth in the future -- something climatologists don't deny -- and an arguably poor guess at that.
