*Have scientists really admitted climate change sceptics ...*

The Scientific Guide to Global Warming Skepticism looks at both the evidence that human activity is causing global warming and the ways that climate 'skeptical' arguments can mislead by presenting only small pieces of the puzzle rather than the full picture. The Guide explains the science in brief, plain language without getting too technical. For those who wish to dig deeper into the science, more detailed treatments can be found at the following pages

those skeptical about the severity of future warming.

These are: Humans are responsible for increasing CO<sub>2</sub> The effects of CO<sub>2</sub> in the atmosphere were first established in 1850. Radiative physics shows us that a doubling of CO<sub>2</sub> would raise global temperatures by at least 1.80 Celsius. More warming than this is possible but how much is uncertain.

A Skeptics' Guide to Global  
Warming

This latest defector from the  
global warming camp caps a year  
in which numerous scientific  
studies have bolstered the claims  
of climate skeptics. Scientific  
studies that debunk the dire  
predictions of human-caused  
global warming have continued  
to accumulate and many believe  
the new science is shattering the  
media-promoted scientific  
“ consensus ” on climate  
alarmism. See: (<https://www.epw.senate.gov/pressitem.cfm?party=rep&id=264777>) Related

Global warming skeptics also believe the models used to predict Earth's future under global warming are unreliable. They feel that while the sun, clouds, gases, glaciers and oceans are responsible for weather, so, too, are other factors,

including some we don't currently understand.

According to global warming skeptics, computer models are merely a guess at what will happen on Earth in the future -- something climatologists don't deny -- and an arguably poor guess at that.

## A Skeptics Guide to Climate Change

The global warming controversy concerns the public debate over whether global warming is occurring, how much has occurred in modern times, what has caused it, what its effects will be, whether any action can or should be taken to curb it, and if so what that action should be. In the scientific literature, there is a strong consensus that global surface temperatures have increased in recent ...
