New Complete Digest of the Decisions of the Supreme Court and the District Courts of Appeal of the

State of California, and of All General Decisions Dealing with California Law John Wiley & Sons

Steve and Susan Zumdahl's texts focus on helping students build critical thinking skills through the

process of becoming independent problem-solvers. They help students learn to think like a chemist so

they can apply the problem solving process to all aspects of their lives. In CHEMISTRY: AN ATOMS

FIRST APPROACH, the Zumdahls use a meaningful approach that begins with the atom and proceeds

through the concept of molecules, structure, and bonding, to more complex materials and their

properties. Because this approach differs from what most students have experienced in high school

courses, it encourages them to focus on conceptual learning early in the course, rather than relying on

memorization and a plug and chug method of problem solving that even the best students can fall back

on when confronted with familiar material. The atoms first organization provides an opportunity for

students to use the tools of critical thinkers: to ask questions, to apply rules and models and to

evaluate outcomes. Important Notice: Media content referenced within the product description or the
