intertwined to present new global opportunities to reorganize capitalism as a unified world system headed by an emerging transnational capitalist class. The book challenges the common view that nation states still define international relations, with the United States as hegemonic leader of the world system. Instead Harris offers a more complex analysis of world affairs that sees the current period as one of transition between nationally based industrial capitalism and a global system based on revolutionary methods of production and new class relationships. He argues this conflict appears in every country as national economies realigned to fit new patterns of world accumulation creating a host of political tensions within and between nations. This analysis is detailed in a distinctive interpretation of the US military/industrial complex, as well as the contemporary class struggles in Germany and the emerging powers of China, India and Brazil. The book concludes by investigating alternative trends which are currently challenging the

inequalities of global capitalism, unfolding a fresh approach to the relationship between the state, market and civil society.

"Badura-Skoda addresses the place of the piano in the eighteenth century from the perspective of a scholar and performer" (Eighteenth-Century Music). In the late seventeenth

century, Italian musician and inventor Bartolomeo Cristofori developed a new musical instrument—his *cembalo che fa il piano e forte*, which allowed keyboard players flexible dynamic gradation. This innovation, which came to be known as the hammer-harpsichord or *fortepiano grand*, was slow to catch on in musical circles. However, as renowned piano historian Eva Badura-Skoda demonstrates, the instrument inspired new

keyboard techniques and performance practices and was eagerly adopted by virtuosos of the age, including Scarlatti, J. S. Bach, Clementi, Haydn, Mozart, and Beethoven. Presenting a rich array of archival evidence, Badura-Skoda traces the construction and use of the *fortepiano grand* across the musical cultures of eighteenth-century Europe, providing a valuable resource for music historians, organologists, and performers. "Badura-

Skoda has written a remarkable volume, the result of a lifetime of scholarly research and investigation. . . . Essential." –Choice

Market-Led Strategic Change

Packt Publishing Ltd

This book is about generalized linear models as described by NeIder and Wedderburn (1972).

This approach provides a unified theoretical and computational framework for the

most commonly used statistical methods: regression, analysis of variance and covariance, logistic regression, log-linear models for contingency tables and several more specialized techniques. More advanced expositions of the subject are given by McCullagh and

NeIder (1983) and Andersen (1980). The emphasis is on the use of statistical models to investigate substantive questions rather than to produce mathematical descriptions of the data. Therefore parameter estimation and hypothesis testing are stressed. I have assumed that the reader is

familiar with the most commonly used statistical concepts and methods and has some basic knowledge of calculus and matrix algebra. Short numerical examples are used to illustrate the main points. In writing this book I have been helped greatly by the comments and criticism of my students and

colleagues, especially Anne Young. However, the choice of material, and the obscurities and errors are my responsibility and I apologize to the reader for any irritation caused by them. For typing the manuscript under difficult conditions I am grateful to Anne McKim, Jan Garnsey, Cath Claydon and Julie Latimer.

for vehicle and chassis components at a major automotive company. The book is primarily intended for students of automotive engineering, but also for all technicians and designers working in this field. Other enthusiastic engineers will also find it to be a useful technical guide. The present volume (The Automotive Chassis - Volume 1: Component
