Proven and Promising Programs for America's Schools Corwin Press

First released in the Spring of 1999, *How People Learn* has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do—with curricula, classroom settings, and teaching methods—to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. *How People Learn* examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.

Success for All McGraw-Hill College

This book sets out a proposal for applying psychological and educational psychology concepts to improve work with children and young people. It also suggests how some of the criticism aimed at pedagogical-psychology practice can be answered. In several respects educational psychology practice seems to be in a transition phase and could even be said to be suffering an identity crisis: educational establishments and education policy alike are looking for different skills than those the psychology profession traditionally provides, and people are generally questioning the relevance and applicability of pedagogical-psychological counseling. The book is based on the fundamental premise that good professional practice is contingent upon circumstances that allow practitioners to apply their knowledge, experience and skills in the specific encounter with a specific task. This means that the ability to act pragmatically and creatively is, and will increasingly be, an important skill not only for educational psychologists, but also for psychologists in general. In other words, psychologists must be able to contribute to tasks in new ways and new contexts when required. Intended primarily for students of psychology, school psychologists and other professional groups that provide counseling in schools, the book is also a valuable resource for the various groups that use pedagogical-psychology tools and insights in their work with children and young people.
