Typical small gas engine cylinder temp is...? - FlyingGiants High throttle for 20

seconds and I checked the head temps from all angles around the top of the head. The highest I got was 240. I then put the little exhaust extension in (it's a push-in and stay fit, it's that tight) It extended the original exhaust 2-5/8". That increased the top end about 350 rpm and the head temp to a little over 240.

Gasoline Engine Exhaust Manifold Temperatures | It Still Runs

While the average temperature for the exhaust is 300 to 500 degrees or 600 to 930 Fahrenheit, you can still experience temperatures as high as 1200 degrees or 2200 Fahrenheit whenever you have been driving really hard. You should be on the lookout for bends on the exhaust pipe.

Gasoline exhaust gases burn in the range of 1,000 to 1,400 degrees Fahrenheit. In comparison, diesel engines burn at a temperature range of 500 to 800 degrees Fahrenheit, according to WC Engineering. Exhaust gas temperature is used to measure an engine's health, and it is important to the evaluation of the catalytic converter of an internal combustion engine.

taking care of these factors
results in restoring normal
temperatures. Exhaust gas is by-

Small Engine Exhaust
Temperature

While there is a certain variation
between vehicles and engines,
exhaust temperatures are
generally low, in some cases
below 300 ° C. Figure 3 shows a
typical exhaust temperature
profile for a light-duty diesel
vehicle over the NEDC and
compares it with a gasoline
vehicle with a similar power
rating [2157]. Significant
differences exist in exhaust
temperatures over the urban and
the highway portions of the test,
see vehicle E in Figure 2 and
Figure 3 (the highway segment
begins at 800 s).
