The Unknown Cultural Revolution challenges the established narrative of China's Cultural Revolution, which assumes that this period of great social upheaval led to economic disaster, the persecution of intellectuals, and senseless violence. Dongping Han offers a powerful account of the dramatic improvements in the living conditions, infrastructure, and agricultural practices of China's rural population that emerged in this period. Drawing on extensive

local interviews and records in rural Jimo County, in Shandong Province, Han shows that the Cultural Revolution helped overthrow local hierarchies, establish participatory democracy and economic planning in the communes, and expand education and public services, especially for the elderly. Han lucidly illustrates how these changes fostered dramatic economic development in rural China. The Unknown Revolution documents a neglected side of China's Cultural Revolution, demonstrating the potential of mass education and empowerment for radical political and economic transformation. It is a bold and provocative work, which demands the attention not only of students of contemporary Chinese history but of all who are concerned with poverty and inequality in the world today.

Since its first appearance in 1950, Pounder's Marine Diesel Engines has served seagoing engineers, students of the Certificates of Competency examinations and the marine engineering industry throughout the world. Each new edition has noted the

changes in engine design and the influence of new technology and economic needs on the marine diesel engine. Now in its ninth edition, Pounder's retains the directness of approach and attention to essential detail that characterized its predecessors. There are new chapters on monitoring control and HiMSEN engines as well as information on developments in electronic-controlled fuel injection. It is fully updated to cover new legislation including that on emissions and provides details on enhancing overall efficiency and cutting CO2 emissions. After experience as a seagoing engineer with the British India Steam Navigation Company, Doug Woodyard held editorial positions with the Institution of Mechanical Engineers and the Institute of Marine Engineers. He subsequently edited The Motor Ship journal for eight years before becoming a freelance editor specializing in shipping, shipbuilding and marine engineering. He is currently technical editor of Marine Propulsion and Auxiliary Machinery, a contributing editor to Speed at Sea, Shipping World and Shipbuilder and a technical press consultant to Rolls-Royce Commercial Marine. * Helps engineers to understand the latest changes to marine diesel engines * Careful organisation of the new edition enables readers to access the information they require * Brand new chapters focus on monitoring control systems and HiMSEN engines. *

Over 270 high quality, clearly labelled illustrations and figures to aid understanding and help engineers quickly identify what they need to know.

This landmark joint publication between the National Air and Space Museum and the American Institute of Aeronautics and Astronautics chronicles the evolution of the small gas turbine engine through its comprehensive study of a major aerospace industry. Drawing on in-depth interviews with pioneers, current project engineers, and company managers, engineering papers published by the manufacturers, and the tremendous document and artifact collections at the National Air and Space Museum, the book captures and memorializes small engine development from its earliest stage. Leyes and Fleming leap back nearly 50 years for a first look at small gas turbine engine development and the seven major corporations that dared to produce, market, and distribute the products that contributed to major improvements and uses of a wide spectrum of aircraft. In non-technical language, the book illustrates the broad-reaching influence of small turbines from commercial and executive aircraft to helicopters and missiles deployed in recent military engagements. Detailed corporate histories and photographs paint a clear historical picture of turbine development up to the present. See for yourself why *The History of North American Small Gas Turbine Aircraft Engines* is the most definitive reference book in its field. The publication of *The History of North American Small Gas Turbine Aircraft Engines* represents an important milestone for the National Air and Space Museum (NASM) and the American Institute of Aeronautics and Astronautics (AIAA). For the first time, there is an authoritative study of small gas turbine engines, arguably one of the most significant spheres of aeronautical technology in the second half of

Since the first EcoDesign International Symposium held in

1999, this symposium has led the research and practices of environmentally conscious design of products, services, manufacturing systems, supply chain, consumption, as well as economics and society. EcoDesign 2011 - the 7th International Symposium on Environmentally Conscious Design and Inverse Manufacturing - was successfully held in the Japanese old capital city of Kyoto, on November 30th - December 2nd, 2011. The subtitle of EcoDesign 2011 is to "design for value innovation towards sustainable society." During this event, presenters discussed the way to achieve both drastic environmental consciousness and value innovation in order to realise a sustainable society. *Design for Innovative Value Towards a Sustainable Society* Penguin

Jay E. Riedel was born 19 November 1939 in Freeport, Long Island, New York, and received his Bachelor of Arts Degree in Mathematics from the University of Buffalo, Buffalo, New York, and his commission as a Second Lieutenant through AFROTC in July 1961. Colonel Jay E. Riedel retired 1 April 1992 after thirty years of active service to his country. His last assignment was Senior Air Force Representative to the United States Army Infantry, Ft. Benning, Georgia. *Memories of a Fighter Pilot* is a collection of as many of his personal recollections as he can remember that would be of a significant interest to most readers. They are as accurate as he remembers them. Many will make you laugh, some will water your eyes, and some will have you gripping your chair with white knuckles. "I have experienced many of life's ups and downs, and I hope all who read of these episodes will be entertained, yet glean some information that may be of use in their own lives. It was quite a ride." Foreword by General Chuck Horner.
