In retrospect it is difficult to accept that Western democracies have implicitly supported, or at least tolerated, the legalized system of white supremacy in South Africa known as apartheid. Renate Pratt's new book, *In Good Faith*, explains why the Christian churches were among the first to publicly protest, and why they provided such cogent and determined international support for the struggle against apartheid. The Taskforce on the Churches and Corporate Responsibility is a coalition of Christian churches that for nearly twenty years was one of Canada's leading anti-apartheid advocates. As the first coordinator of this Taskforce, Renate Pratt was at the centre of the early anti-apartheid initiatives in Canada and consequently is able to supply a clear and accurate view. The book traces the history of exchanges between the Taskforce and successive ministers and senior civil servants of the Department of External Affairs. It details the reluctant and weak responses offered by the Canadian government and business community right up to the time of Nelson Mandela's release from prison. *In Good Faith* will be of particular interest to Canadian Christians concerned with ecumenical co-operation and with the social and political dimensions of their faith. Equally, it will appeal to those interested in the impact of public interest organizations on public policy or the relationship between politics and business interests.

The True Adventures of a Vagabond is the story of a young boy growing up in Brooklyn without a father and learning first hand street sense where nothing comes easy for survival in a big city that would, curiously and eventually come in handy in his successful street-smart career as a Special Agent. His early years unwittingly started the chain of life events that would lead him to many foreign countries and meeting some of the most powerful men in the world. The early story continues with the stealing of a car, the engagement to his first wife who happened to be engaged to someone else, and a direction with more question marks than answers, and who, with everything going against a kid growing up in an urban environment, became one of the highest decorated Special Agent within his field of expertise. Most of SA DePasquale's writings emerged in the form of hundreds of Criminal Investigations later prosecuted in a federal court. Along the way in his notable career, from Asia to Africa to Latin America and elsewhere, SA DePasquale enjoyed an insider-view at the highest levels of government and intelligence that few are privy to. He participated in major drug arrests and investigations that included U.S. involvement, in more ways than commonly acknowledged, with the South American drug trade and the capture of Manuel Noriega. SA DePasquale's career ended in retirement after being informed by his superiors that an up-coming inspection was more important than the surveillance of a known drug dealers home who had been threatened with death by his suppliers, this lack of surveillance resulted not only with the death of the drug dealer but the brutal death of his four young kids. The writing was on the wall, passing an inspection was more important than the life of others, it was time for him to leave. After retirement his adventures continued, looking for answers in places there were none, what was SA DePasquale looking for? Maybe after reading this book someone has the answers, until then his adventures continue.

**Medium/Heavy Duty Truck Engines, Fuel & Computerized Management Systems** Author House  
Ideal for students, entry-level technicians, and experienced professionals, the fully updated Sixth Edition of MEDIUM/HEAVY DUTY TRUCK ENGINES, FUEL & COMPUTERIZED MANAGEMENT SYSTEMS is the most comprehensive guide to highway diesel engines and their management systems available today. The new edition features expanded coverage of natural gas (NG) fuel systems, after-treatment diagnostics, and drive systems that rely on electric traction motors (including hybrid, fuel cell, and all-electric). Three new chapters address electric powertrain technology, and a new, dedicated chapter on the Connected Truck addresses telematics, ELDs, and cybersecurity. This user-friendly, full-color resource covers the full range of commercial vehicle powertrains, from light- to heavy-duty, and includes transit bus drive systems. ### MotorBoating How to Install a New Diesel Engine

After a ways I could see a huge boat mostly buried in the sand, while examining the boat it seemed to have been a cabin cruiser about 65 feet long. Then walking about 100 feet south of the boat I was stunned to find a human body, not something you see every day. The person was mostly a skeleton

although hair was evident on his head; jeans and shirt were tattered and the skull looking toward the sky where I could see some primitive dental work. After a couple more frightening traverses, while hanging in space, I thought we had passed the most difficult situations, wrong again! We came to a place where you're climbing along the cliff face with no more than 4 inches of rock on which to place your feet. That accelerated my heartbeat a tad! While hiking on a narrow dike I came face to face with a Bison almost blocking my passage. As I walked past he charged me. I yelled "Stop That!" and he stopped about 2 feet away. Few people have a desire or capability to experience 'the edge'. For most of my life I professed, "To experience life as close to the edge as possible to death, as this is the only way to live a life to its fullest." Being up here, among 12,000 foot peaks, in the enchanting time before sunrise, will always remain as a consummate memory in my mind. I was filled with a delightful wonderment. Then there came the serene Alpine Glow as the sun embraced the mountain peaks. As John Muir would say, "A noble experience." The sun would occasionally pop out, followed by dark clouds and usually hail or sleet. I didn't care; I was wet; in a numbing trance and reduced to taking baby steps forward-'one step at a time'. Around 6 pm I reached the road, which was back down at 10,000 feet. I had only traveled 8 1/2 miles, but on the most difficult trek of my life. We had chased the Gator near shore; I jumped from the boat in knee deep mud; struggling through the mud I grabbed the Gator with my left hand and immediately he came around and imbedded his teeth in my right arm. Just as quickly he let go and I loaded him into the boat. Mostly I was concerned with infection, but a little Rum in the holes took care of that.

The international or multi-national corporation has become an important phenomenon in today's business world and Massey-Ferguson is an ideal example of such an organization. Through its predecessor companies it can train its history to 1847, and so it has encountered virtually all the difficulties and developments of the last hundred years in business organization and management science. The development has not been straightforward for it has been much more than the growth of a single company in an expanding market. Management reorganization and the introduction of new management planning and control techniques contributed a good deal to the company's expansion, and because mergers played a vital role, the history of other companies is also involved. Dr. Neufeld's study concentrates on the years after the Second World War, a period in which the company's international operations became increasingly complex. He records the events that helped to shape the company's character and structure, and at the same time investigates the company's successes and failures in adjusting to a changing national and international business environment. His study reveals why Massey-Ferguson developed into a global corporation, an organization that considers the whole of the international environment when making decisions relating to the allocation of its marketing,

purchasing, manufacturing and engineering activities.

#### *A History of the Wicksteed Park Railway*

This book is my personal journal of my boatbuilding project. I hope it will be useful to anyone considering undertaking such a task. I'm not an expert by any stretch of the imagination when it comes to building a boat. I'm strictly an amateur builder with very little experience. I've built a couple small boats when I was younger. I helped my dad and brother build a little runabout and I built a johnboat in my living room one time, but other than that, I have only done routine carpenter and cabinet type work building houses. I do not possess any special skills or education, which makes this task easy for me. I learned a lot about boats in the service where I was a vessel master for the US Army. I got my masters certificate, which qualified me to operate unlimited tonnage open ocean vessels for the military. These are the sum total of my qualifications to try to build a boat. I'm not saying it isn't a formidable task no matter your qualifications, just that if I can do it, anyone can.

During the initial wave of powered farming in the early 20th century, most medium- to large-scale farmers traded in their mules for tractors. In the 1930s, when manufacturers began marketing their wares to the holdouts, they began building smaller, inexpensive tractors designed to do the work of two mules. This color history covers John Deere's entries in the market, namely its extremely popular two-cylinder models: the L, LA, M, MC, 40, 420, 320, 430, and 330. Today, these models are some of the most popular among the old-tractor crowd. New color photography features restored models today and is supplemented by archival images from the early 20th century. Sidebars examine John Deere's competitors in the class.

"As a reference book it has to be classed as one of the best! There should be a copy of it in every college library." Association of Motor Vehicle Teachers' Newsletter The Motor Vehicle has been an essential reference work for both the student and practising engineer ever since the first edition appeared in 1929. Today it is as indispensable to anyone with a serious interest in vehicle design techniques, systems and construction as it was then. The current edition has undergone a major revision to include seven new chapters. These include Electric Propulsion; covering all aspects from lead acid and alternative batteries to fuel cells and hybrid vehicles, Static and Dynamic Safety, and Wheels and Tyres. The chapter on the compression ignition engine has been expanded to form three chapters, concentrating on aspects such as common rail injection, recently developed distributor type pumps and electronic control of injection. Automatic, semi-automatic and continuously variable ratio transmissions are

covered in two new chapters. A third contains information on the latest developments in computer-aided control over both braking and traction, for improving vehicle stability, while another contains entirely new information on the practice and principles of electrically-actuated power-assisted steering. Also included is coverage of material detailing the latest knowledge and practice relating to safety systems, vehicle integrity, braking systems and much more. The established layout of the book is retained, with topics relating to the Engine, Transmission and Carriage Unit dealt with in turn. Each chapter is well-provided with diagrams, sections, schematics and photographs, all of which contribute to a clear and concise exposition of the material under discussion. Latest extensive revisions to a well-established title New chapters on electric propulsion and vehicle safety.
