walk in closet space. While concrete things like measurements and materials are more "science," there's an actual "art" to creating a solution that meets the needs of the clients and the parameters of the space." says Butchko. "This book covers both. It's focus is designing the space, not the installation or the fabrication of the closet. "The book, "How To Design a Walk In Closet," highlights: -How to design to maximize corner space -How to design around common closet obstacles like steam mechanicals, doors and windows that interrupt space and inconveniently placed outlets. - The best location for things like long hang, gym clothes and shoe collections. -How to determine whether or not an island will work in the space is in your future -What a bridge shelf is and how to explain it so clients

How do you prevent a critical care nurse from accidentally delivering a morphine overdose to an ill patient? Or ensure that people don't insert their arm into a hydraulic mulcher? And what about enabling trapped airline passengers to escape safely in an emergency? Product designers and engineers face myriad such questions every day. Failure to answer them correctly can result in product designs that lead to injury or even death due to use error. Historically, designers and engineers have searched for answers by sifting through complicated safety standards or obscure industry guidance

documents. Designing for Safe Use is the first comprehensive source of safety-focused design principles for product developers working in any industry. Inside you ' ll find 100 principles that help ensure safe interactions with products as varied as baby strollers, stepladders, chainsaws, automobiles, apps, medication packaging, and even airliners. You ' ll discover how protective features such as blade guards, roll bars, confirmation screens, antimicrobial coatings, and functional groupings can protect against a wide range of dangerous hazards, including sharp edges that can lacerate, top-heavy items that can roll over and crush, fumes that can poison, and small parts that can pose a choking hazard. Special book features include: Concise, illustrated descriptions of design principles Sample product designs that illustrate the book ' s guidelines and exemplify best practices

Literature references for readers interested in learning more about specific hazards and protective measures. Statistics on the number of injuries that have arisen in the past due to causes that might be eliminated by applying the principles in the book. Despite its serious subject matter, the book's friendly tone, surprising anecdotes, bold visuals, and occasional attempts at dry humor will keep you interested in the art and science of making products safer. Whether you read the book cover-to-cover or jump around, the book's relatable and practical approach will help you learn a lot about making products safe. *Designing for Safe Use* is a primer that will spark in readers a strong appreciation for the need to design safety into products. This new book, by the original developer of the BACnet standards, explains how BACnet's protocols manage all basic building functions in a seamless, integrated way. BACnet is a data communication protocol for building automation and control systems, developed within ASHRAE in cooperation with ANSI and the ISO. This book explains how BACnet works with all major control systems--including those made by Honeywell, Siemens, and Johnson Controls--to manage everything from heating to ventilation

to lighting to fire control and alarm systems. BACnet is used today throughout the world for commercial and institutional buildings with complex mechanical and electrical systems. Contractors, architects, building systems engineers, and facilities managers must all be cognizant of BACnet and its applications. With a real 'seat at the table,' you'll find it easier to understand the intent and use of each of the data sharing techniques, controller requirements, and opportunities for interoperability between different manufacturers' controllers and systems. Highlights include: * A review of the history of BACnet

and its essential features, including the object model, data links, network technologies, and BACnet system configurations; * Comprehensive coverage of services including object access, file access, remote device management, and BACnet-2012's new alarm and event capabilities; * Insight into future directions for BACnet, including wireless networking, network security, the use of IPv6, extensions for lifts and escalators, and a new set of BACnet Web Services; * Extensive reference appendices for all objects and services; and * Acronyms and abbreviations

Alzheimer's disease is the #1 most terrifying disease today. Despite

billions of dollars of research, there are no significant cures for dementia or Alzheimer's (the most common form of memory loss), which accounts for up to 70 percent of all dementia. Almost six million Americans have been diagnosed with Alzheimer's; with an annual cost of dementia care and research in the United States of \$215 billion, more than is spent on cancer or heart disease. In *The Better Brain Solution*, Dr. Steven Masley writes of the two urgent epidemics we are facing now--escalating rates of disabling memory loss and rapidly increasing rates of diabetes and pre-diabetes--and yet both conditions are largely preventable. Most

people today understand the brain and the the effect that elevated blood sugar has on their cardiovascular health, but few understand that insulin resistance is significantly damaging to the brain. In the *The Better Brain Solution*, Masley offers a program that, in the fight against diabetes, memory loss, and cognitive decline, can reverse insulin resistance, enhance cognitive performance, and stop cognitive decline before it is too late. Masley gives the reader the tools he has developed for his own private patients to prevent and reverse this metabolic syndrome and to achieve normal blood sugar levels (below 95 mg/dL). He explores the impact of insulin resistance on

heart/brain/diabetes connection, explaining how cognitive function and memory work and he discusses the risk factors for memory loss. *The Better Brain Solution* offers the reader a comprehensive plan for achieving optimal brain health, providing information on brain-boosting foods and supplements as well as providing a practical way to assess cognitive function. With 50 recipes for foods that improve brain and body and that are easy to prepare.

Solar power for pumping groundwater has a vast potential for improving the sustainability of water supply schemes. However experience also shows that a lack of knowledge, capacity and expertise to design and implement such schemes is holding back their adoption. This book bridges this gap to equip engineers and technicians with the requisite knowledge for

design, implementation and operation of sustainable solar powered water schemes. Solar Pumping for Water Supply is a state of the art review of solar water pumping technology combined with practical insights, lessons and best practices drawn from experience. It takes the reader step by step through the different phases that comprise a solar water pumping project, namely: assessment, design, purchase of equipment, installation, operation and

management. The book also covers the economics of using solar pumping technology, especially when compared to diesel generators and hand pumps. Finally, the social aspects are included, specifically relating to the operation and management of solar pumping systems and the role that beneficiaries, implementers, government and the private sector might play to ensure long-lasting water supply. The book provides links and references to tools, documents and videos to

accompany the content of the different chapters. Essential reading for solar technical practitioners at NGOs, UN agencies, government offices and private sector, including Global and Regional Technical advisors and Field engineers wanting to understand and know how to design water systems using solar power. A basic knowledge in the field of water supply is assumed, but no previous knowledge of solar photovoltaic technology is required. Alberto Ibáñez Llarío is a

Global Solar and Water Advisor with the International Organization for Migration and has 15 years of experience in water systems and solar PV in various locations around the world. Asenath Kiprono is a solar water pumping expert with 12 years' experience in design and implementation of pumping systems in rural Africa, including solar pumping systems in the private, public and humanitarian sectors.
