Poetry. Latino/Latina Studies. LGBT Studies. "Like Whitman, Quesada is a poet of motion—journeying to the center of the US, where the traditions and innovations of first-generation Americans traverse the meditative starbursts of hills; ford rivers; cross prairies; and seek out 'the alpenglow of tomorrow and tomorrow.' From Costa Rica to Los Angeles and across the continent, Quesada's poems chronicle one family's history: from the courtship of his parents to their separation, from his childhood struggles to awakening desire from his mother's lottery winnings to his own personal losses, Ruben Quesada carries us toward 'that seam in space' where dream and experience intersect. This isn't the story of what it means to come to this country. It's the story of what it means to belong here"—D. A. Powell.

Practitioners often say: 'We need to do something differently but are not sure what to do or how to do it' and 'Scientists explain complexity but don't tell you what to do in practical terms'. This book has been written to offer solutions for these practitioners - to provide an Approach for 'putting complexity to work'. Practice is, de facto, determined by changing contexts. In a specific instance, what needs doing will depend on the circumstances, and cannot be bounded or decided in advance. But when most auditors, donors or managers demand tangible, target-driven results within a fixed time frame, how can practitioners convince them that working with the open principles of complexity will lead to more successful and sustainable solutions? This book is not 'yet another' complexity book. What it offers is an in-depth, systematic, Framework that practitioners can use to focus on the dynamic phenomena already active in their working context, to be able to shape and influence these phenomena 'on the fly'. The authors present six case studies, including the UK Fuel Crisis (2000) and the 2010 Gulf of Mexico Oil Spill. Their Approach reveals a clear understanding of the stresses and strains that were felt throughout the crises and how these might have been handled differently had an appreciation of the underlying complexity been part of standard practice. Drawn from their own experiences and those of other practitioners, and to bridge the gap between theory, experience and practice, the authors have produced a clear and erudite 'bible' for realising the inherent benefits of 'putting complexity to work'.

Is violence on the streets caused by violence in video games? Does cyber-bullying lead to an increase in suicide rates? Are teens promiscuous because of Teen Mom? As Karen Sternheimer clearly demonstrates, popular culture is an easy scapegoat for many of society's problems, but it is almost always the wrong answer. Now in its second edition, *Connecting Social Problems and Popular Culture* goes beyond the news-grabbing headlines claiming that popular culture is public enemy number one to consider what really causes the social problems we are most concerned about. The sobering fact is that a "media made them do it" explanation fails to illuminate the roots of social problems like poverty, violence, and environmental degradation. Sternheimer's analysis deftly illustrates how welfare "reform," a two-tiered health care system, and other difficult systemic issues have far more to do with our contemporary social problems than Grand Theft Auto or Facebook. The fully-revised new edition features recent moral panics (think sexting and cyberbullying) and an entirely new chapter exploring social media. Expanded discussion of how we understand society's problems as social constructions without disregarding empirical evidence, as well as the cultural and structural issues underlying those ills, allows students to stretch their sociological imaginations.

This book contains six studies on various national environmental policies and environment -oriented technology policy systems in Austria, Denmark, Germany, the Netherlands, Spain, and the United Kingdom, sandwiched between this introductory and a concluding chapter. These studies were conducted as part of the ENVINNO research project, "Towards an Integration of Environmental and Ecology-Oriented Technology Policy: Stimulus and Response in Environment Related Innovation Networks", which formed part of the Targeted Social and Economic Research (TSER) Programme of Directorate-General XII of the European Commission, now 1 Directorate-General for Research. We like to thank Mrs. Genevieve Zdrojewski of GD Directorate-General Research for her kind support of our research project. The project was carried out between 1998 and 2001 by research teams from the six countries. The co-ordinating institute was the Department of Environmental Economics and Management at the Vienna University of 2 Economics and Business Administration. At this place we want to mention all researchers involved in the ENVINNO project and we want to thank them all for their contributions to this book and the project and for the good time we have had performing the project and meeting each other at regular intervals in Vienna (A), Enschede (NL), Berlin (D), and Sevilla (E). Concepts from Tensor Analysis and Differential Geometry discusses coordinate manifolds, scalars, vectors, and tensors. The book explains some interesting formal properties of a skew-symmetric tensor and the curl of a vector in a coordinate manifold of three dimensions. It also explains Riemann spaces, affinely connected spaces, normal coordinates, and the general theory of extension. The book explores differential invariants, transformation groups, Euclidean metric space, and the Frenet formulae. The text describes curves in space, surfaces in space, mixed surfaces, space tensors, including the formulae of Gaus and Weingarten. It presents the equations of two scalars  $K$  and  $Q$  which can be defined over a regular surface  $S$  in a three dimensional Riemannian space  $R$ . In the equation, the scalar  $K$ , which is an intrinsic differential invariant of the surface  $S$ , is known as the total or Gaussian curvature and the scalar  $U$  is the mean curvature of the surface. The book also tackles families of parallel surfaces, developable surfaces, asymptotic lines, and orthogonal ennuples. The text is intended for a one-semester course for graduate students of pure mathematics, of applied mathematics covering subjects such as the theory of relativity, fluid mechanics, elasticity, and plasticity theory.
