The second approach to interconnecting social networks and semantics focuses on a solution for mediating between social tagging systems. The Upper Tag Ontology (UTO) is proposed to integrate social tagging data by mediating between related social metadata schemes. We discuss how UTO data can be linked with other social metadata (e.g., FOAF, DC,

Using social network and semantic analysis to analyze ...

Social Networks and the Semantic Web: 5 (Semantic Web and Beyond) Whether or not or not we modified the Web or the Web has modified us is troublesome to discern, even with the information of hindsight. Social Networks and the Semantic Web provides two most important case analysis. The first case analysis reveals the prospects...
