Social Psychology, 2nd Edition John Wiley & Sons

This book combines chapters written by leading social psychologists and economists, illuminating the developing trends in explaining and understanding economic behavior in a social world. It provides insights from both fields, communicated by eloquent scholars, and demonstrates through recent research and theory how economic behaviors may be more effectively examined using a combination of both fields. Social Psychology and Economics comes at a particularly fitting time, as a psychological approach to economics has begun to flourish in recent years, and papers exploring the intersection of these two disciplines have appeared in peer-reviewed journals, opening a dynamic dialogue between previously separated fields. This volume, the first in the Society for Judgment and Decision Making Series since acquired by Psychology Press, includes chapters by economists and psychologists. It addresses a variety of economic phenomena within a social context, such as scarcity and materialism, emphasizing the importance of integrating social psychology and economics. Social Psychology and Economics is arranged in seven parts that discuss: an introduction to the topic; preferences, utility, and choice; emotions; reciprocity, cooperation, and fairness; social distance; challenges to social psychology and economics; and collaborative reflections and projections. The market for this book is students, researchers, and professionals in the disciplines of economics, psychology, business, and behavioral decision making. Graduate students and upper-level undergraduate students will consider it a useful supplemental text.

Social Psychology, Tenth Ed McGraw Hill

Written by four leading researchers in the study of prosocial behavior, this book introduces a new perspective on prosocial behavior for the 21st century. Building on the bystander intervention work that has defined this area since the 1960s, The Social Psychology of Prosocial Behavior examines prosocial behavior from a multilevel perspective that explores the diverse influences that promote actions for the benefit of others and the myriad ways that prosocial actions can be manifested. The authors expand the breadth of the field, incorporating analyses of biological and genetic factors that predispose individuals to be concerned for the well being of others, as well as planned helping such as volunteering and organizational citizenship behavior and cooperative behavior within and between groups. They identify both the common and the unique processes that underlie the broad spectrum of prosocial behavior. Each chapter begins with a question about prosocial behavior and ends with a summary that answers the question. The final chapter summarizes the questions and the answers that research provides. Conceptual models that elaborate on and extend the multilevel approach to prosocial behavior are used to tie these findings together. The book concludes with suggestions for future research. The Social Psychology of Prosocial Behavior addresses the following: *the evolution of altruistic tendencies and other biological explanations of why humans are predisposed to be prosocial; *how the situation and motives that are elicited by these situations affect when and how people help; *the causes and maintenance of long-term helping, such as volunteering; *how prosocial behavior changes over time and the developmental processes responsible for these changes; *the consequences of helping for both the people who provide it and those who receive it;

*helping and cooperation within and between groups and the implications of these actions. This accessible text is ideal for advanced courses on helping and altruism or prosocial behavior, taught in psychology, sociology, management, political science, and communication, or for anyone interested in learning more about prosocial behavior in general.

Like its predecessors, Volume III of the Handbook for Teaching Introductory Psychology provides introductory psychology instructors with teaching ideas and activities that can immediately be put into practice in the classroom. It contains an organized collection of articles from Teaching of Psychology (TOP), the official journal of the Society for the Teaching of Psychology, Division 2 of the American Psychological Association. Volume III contains 89 articles from TOP that have not been included in other volumes. Another distinction between this volume and its predecessors is its emphasis on testing and assessment. The book is divided into two sections. Section One, "Issues and Approaches in Teaching Introductory Psychology," contains 52 articles on critical issues, such as: how to approach the course; understanding students' interests, perceptions, and motives; students' existing knowledge of psychology (including their misconceptions); a comparison of introductory textbooks and tips on how to evaluate them; test questions and student factors affecting exam performance; an overview of different forms of feedback; giving extra credit; and how to deal with academic dishonesty. Section Two consists of 37 articles that present demonstrations, class and laboratory projects, and other techniques to enhance teaching and learning in both the introductory, as well as advanced courses in the discipline. This section is organized so as to parallel the order of topics found in most introductory psychology textbooks. Intended for academicians who teach the introductory psychology course and/or oversee grad assistants who teach the course, all royalties of the book go directly to the Society for the Teaching of Psychology to promote its activities to further improve the teaching of psychology.

Originally published in 1975, these contributions surveyed the range of social intervention technology available to psychologists at the time, but they are more than a simple cataloguing of technology. The stress is on articulating certain metatheoretical assumptions that underlie different strategies of social intervention. For example, assumptions about the personal agency, the nature of social systems, and levels and forms of interpersonal influences are all examined. The implications for the training of psychologists are developed, and

specific attention is given to the identity crisis in social psychology precipitated by existing pressures and potentials for change at the time.
