Research on gene drive systems is rapidly advancing. Many proposed applications of gene drive research aim to solve environmental and public health challenges, including the reduction of poverty and the burden of vector-borne diseases, such as malaria and dengue, which disproportionately impact low and middle income countries. However, due to their intrinsic qualities of rapid spread and irreversibility, gene drive systems raise many questions with respect to their safety relative to public and environmental health. Because gene drive systems are designed to alter the environments we share in ways that will be hard to anticipate and impossible to completely roll back, questions about the ethics surrounding use of this research are complex and will require very careful exploration. Gene Drives on the Horizon outlines the state of knowledge relative to the science, ethics, public engagement, and risk assessment as they pertain to research directions of gene drive systems and governance of the research process. This report offers principles for responsible practices of gene drive research and related applications for use by investigators, their institutions, the research funders, and regulators.

. Renewal of Life by Transmission. The most notable distinction between living and inanimate things is that the former maintain themselves by renewal. A stone when struck resists. If its resistance is greater than the force of the blow struck, it remains outwardly unchanged. Otherwise, it is shattered into smaller bits. Never does the stone attempt to react in such a way that it may maintain itself against the blow, much less so as to render the blow a contributing factor to its own continued action. While the living thing may easily be crushed by superior force, it none the less tries to turn the energies which act upon it into means of its own further existence. If it cannot do so, it does not just split into smaller pieces (at least in the higher forms of life), but loses its identity as a living thing. As long as it endures, it struggles to use surrounding energies in its own behalf. It uses light, air, moisture, and the material of soil. To say that it uses them is to say that it turns them into means of its own conservation. As long as it is growing, the energy it expends in thus turning the environment to account is more than compensated for by the return it gets: it grows. Understanding the word "control" in this sense, it may be said that a living being is one that subjugates and controls for its own continued activity the energies that would otherwise use it up. Life is a self-renewing process through action upon the environment.

In Horizon, Sea, Sound: Caribbean and African Women’s Cultural Critiques of Nation, Andrea Davis imagines new reciprocal relationships beyond the competitive forms of belonging suggested by the nation-state. The book employs the tropes of horizon, sea, and sound as a critique of nation-state discourses and formations, including multicultural citizenship, racial capitalism, settler colonialism, and the hierarchical nuclear family. Drawing on Tina Camp’t’s discussion of Black feminist futurity, Davis offers the concept future now, which is both central to Black freedom and a joint social justice project that rejects existing structures of white supremacy. Calling for new affiliations of community among Black, Indigenous, and other racialized women, and offering new reflections on the relationship between the Caribbean and Canada, she articulates a diaspora poetics that privileges our shared humanity. In advancing these claims, Davis turns to the expressive cultures (novels, poetry, theater, and music) of Caribbean and African women artists in Canada, including work by Dionne Brand, M. NourbeSe Philip, Esi Edugyan, Ramabai Espinet, Nalo Hopkinson, Amai Kuda, and Djanet Sears. Davis considers the ways in which the diasporic characters these artists create redraw the boundaries of their horizons, invoke the fluid histories of the Caribbean Sea to overcome the brutalization of plantation histories, use sound to enter and reenter archives, and shapeshift to survive in the face of conquest. The book will interest readers of literary and cultural studies, critical race theories, and Black diasporic studies.

What is success at work and why is it important? How do top workers describe their success? How can work, community, leadership,

family, or home and school promote success? Success at work is often associated with career-oriented individuals who sacrifice other areas of life to achieve highly in the workplace, but success can also be defined in other ways. It can consist of feelings of knowledge, competence and accomplishment, stemming from an inner drive to work well and create an expression of mastery. This book focuses on employees who have been rewarded for their skills and expertise. Based on the authors’ in-depth research into the phenomenon of success at work, this book provides a positive human-strength based approach to success and offers a fresh viewpoint to the modern, demanding and hectic work life. Drawing from the theory of positive psychology and outlining new theoretical ideas including work motivation, career orientation, work characteristics, and positive states of work, success is described as a combination of multiple elements which include other areas of life. The book is illustrated throughout with case studies from employees, and it will ignite thoughts about what success at work is and can be, and how to recognize factors which enhance or hinder success in varying contexts. Considering a variety of data, this book will appeal to researchers and academics from the fields of work and organisational psychology, positive psychology, career counselling and coaching.
The Insider's Guide to the Colleges, 2009 Triarchy Press
Barrows, as burial markers, are ubiquitous throughout North-Western Europe. In some regions dense concentrations of monuments form peculiar configurations such as long alignments while in others they are spread out extensively, dotting vast areas with hundreds of mounds. These vast barrow landscapes came about through thousands of years of additions by several successive prehistoric and historic communities. Yet little is known about how these landscapes developed and came about. That is what this research set out to do. By unravelling the histories of specific barrow landscapes in the Low Countries, several distinct activity phases of intense barrow construction could be recognised. Each of these phases contributed in a particular fashion to how the barrow landscape developed and reveals shifting attitudes to these landscape monuments. By creating new monuments in a specific place and in a particular fashion, prehistoric communities purposefully transformed the form and shape of the barrow landscape. Using several GIS-techniques such as a skyline-analysis, this research was able to demonstrate how each barrow then took up a specific (and different) position within such a social landscape. While the majority of the barrows were only visible from relatively close by, specific monuments took up a dominating position, cresting the horizon, and they were visible from much further away. It was argued that these burial mounds remained important landscape monuments on the purple heathlands. They continued to attract attention, and by their visibility ensured to endure in the collective memory of the communities shaping themselves around these monuments. This publication is part of the Ancestral Mounds Research Project of the University of Leiden.

Featuring voices from academics, practitioners, school system leaders, school administrators, and graduate students from across Canada and abroad, this unique edited collection offers conceptual discussions and empirical examples of leadership

for flourishing in a variety of educational contexts. This volume affirms that by fostering positive leadership, striving for well-being, and encouraging flourishing for all, significant benefits and new potentials will be felt throughout the learning communities. Grounded in theoretical approaches of positive leadership, positive psychology, and positive organizational scholarship, the accounts from K-12, post-secondary, and professional contexts explore the impacts and influences of leadership at all levels of education. Editors and chapter authors describe their research findings and first-hand experiences of supporting educators and school leaders in learning how to grow their agentic role for fostering well-being among all members of the community. The book is divided into three sections: stories of school-level flourishing, stories of personal professional flourishing, and stories of the impacts and influences of positive leadership in various educational contexts. Engaging and practical, this book encourages readers to reflect on the topics through discussion questions and to apply the learning to their own educational and organizational settings. This positively oriented volume will be invaluable for students of educational leadership, education administration, and organizational studies in education, in North America and beyond. FEATURES: - Chapters include pedagogical features such as concluding thoughts and discussion questions that bridge K-12 and higher education and reflect on education as a whole - Offers an approach to educational leadership that emphasizes the well-being of both educators and students - Features the voices of academics and school leaders from across Canada, the United States, the United Kingdom, and Australia

This book presents the core concepts of geographical education as a means of understanding global issues from a spatial perspective. It treats education, supported by high standards, approaches, methodologies, and resources, as essential in exploring the interactions of the world's human and environmental systems at local, regional, and global scales embedded in the nature of the discipline of geography. It covers topics such as climate change, sustainable development goals, geopolitics in an uncertain world, global crisis, and population flows, which are of great interest to geography researchers and social sciences educators who want to explore the complexity of contemporary societies. Highly respected scholars in geography education answer questions on key topics and explain how global understanding is considered in K-12 education in significant countries around the globe. The book discusses factors such as the Internet, social media, virtual globes and other technological developments that provide insights into and visualization - in real time - of the intensity of relationships between different countries and regions of the earth. It also examines how this does not always lead to empathy with other political, cultural, social and religious values: terrorism threats and armed conflicts are also essential features of the global world. This book opens the dialogue for global understanding as a great opportunity for teachers, educators, scholars and policy makers to better equip students and future citizens to deal with global issues.

Fundamental world changes that simultaneously undermine a nation-state's charisma and promote the rise of a supra-national system have wide-ranging effects upon national states within a modern global society. My dissertation empirically examines the effects of social and cultural globalization on systems of mass schooling, which are central institutions in every country. Globally, primary and secondary education initially emerged as the premier tool for nation-states to create a unified national citizenry loyal to their country and socialized into a common cultural tradition. I examine the extent to which this original nationalizing purpose of schooling is challenged by the increased emphases on universal human rights and diversity in civic education. The analyses consist of two sections. Hierarchical linear models are used to analyze a unique primary data source of 521 social science textbooks from 74 countries during the period 1970-2008. These findings show a worldwide increase in emphasis on human rights and increases in discussions of diversity in well-established liberal democracies. Cross-national, quantitative analyses are complemented by a qualitative case study of social science curricula in British Columbia (BC), which examines nation-building within a context of strong emphasis on diversity and human rights. The BC study utilizes currently approved high school citizenship education textbooks as well as older textbooks dating back to 1871. It also draws on a selection of historical documents, including Ministry of Education reports, curricular frameworks, and high school exit exams. Process-wise, I find the incorporation of human rights and diversity reflects macro-level changes in national and global society. Content-wise, I find four main approaches to reconciling ideas of human rights and diversity with national identity: (1) framing human rights and multiculturalism as part of national identity, (2) using pedagogical approaches that promote multiple perspectives and individual agency, (3) celebrating social and scientific figures and accomplishments as the source of national pride, and (4) drawing on exogenous sources to affirm state legitimacy. This study is one of the first to theorize that civic education worldwide is moving away from a national focus and to provide empirical evidence of this trend. A key implication is that educational systems are being repurposed from their original goal of constructing a unitary national citizenry to a new view emphasizing human diversity and equality in

a globally interconnected world. Further, students are increasingly taught that the global civil society and non-state actors are important and legitimate agents of social change.

"The one source that sets reference collections on Latin American studies apart from all other geographic areas of the world... The Handbook has provided scholars interested in Latin America with a bibliographical source of a quality unavailable to scholars in most other branches of area studies." -Latin American Research Review

Beginning with volume 41 (1979), the University of Texas Press became the publisher of the Handbook of Latin American Studies, the most comprehensive annual bibliography in the field. Compiled by the Hispanic Division of the Library of Congress and annotated by a corps of more than 140 specialists in various disciplines, the Handbook alternates from year to year between social sciences and humanities. The Handbook annotates works on Mexico, Central America, the Caribbean and the Guianas, Spanish South America, and Brazil, as well as materials covering Latin America as a whole. Most of the subsections are preceded by introductory essays that serve as biannual evaluations of the literature and research under way in specialized areas. The Handbook of Latin American Studies is the oldest continuing reference work in the field. Lawrence Boudon, of the Library of Congress Hispanic Division, has been the editor since 2000, and Katherine D. McCann has been assistant editor since 1999. Riley and her group of expert contributors supply a unique set of worldwide case studies and policy analyses as guidance for indigenous communities and their partners, in attempting to protect their intellectual property. Much of the existing literature already addresses the poor fit between western regimes of intellectual property rights and the requirements for safeguarding indigenous cultural resources. The manuscript gets beyond these negative claims in depicting positive efforts at protecting indigenous knowledge and cultures, notwithstanding these legal limitations. The reader is exposed to a wide array of legal, political, organizational, and contractual strategies deployed by indigenous groups to protect their intellectual property interests.
