The book presents an interdisciplinary systematic evaluation of increasing water stress and scarcity over the globe and specifically South Africa. South Africa is used as the prime example as the country is experiencing similar water challenges in terms of availability and quality as most regions across the globe. Water availability is predominantly used to illustrate water scarcity however, continued degradation of the world ' s freshwater resources, by a multitude of natural and anthropogenic factors, have consequently exacerbated water stress and scarcity due to it being of insufficient quality for various uses. The increase of water scarcity through both natural and anthropogenic factors has in turn led to water being viewed as an increasing risk within all spheres. Water as a source of conflict has come to the forefront

especially within regions which struggle to meet the increasing demands from different water users and trying to achieve future sustainability of the resource. The increase of water scarcity and stress as well as the continued pressure of population and economic growth has brought various new challenges into play. This book focuses on water as an increasing risk over the globe and specifically South Africa by reviewing both water availability and quality, evaluating water as a global and national risk. The book concludes by focusing on current limitations, necessary strategic actions as well as possible policy-related changes which may be required to adapt to future water challenges and to lessen water as an increasing risk.

Water as an Inescapable Risk CRC Press

The International Committee on

Large Dams (ICOLD) held its 26th International Congress in Vienna, Austria (1-7 July 2018). The proceedings of the congress focus on four main questions: 1. Reservoir sedimentation and sustainable development; 2. Safety and risk analysis; 3. Geology and dams, and 4. Small dams and levees. The book thoroughly discusses these questions and is indispensable for academics, engineers and professionals involved or interested in engineering, hydraulic engineering and related disciplines. **Current Global Water Availability, Quality and Risks with a Specific Focus on South Africa** Springer

This comprehensive study of China's Cold War experience reveals the crucial role Beijing played in shaping the orientation of the global Cold War and the confrontation between the United States and the Soviet Union. The success of China's Communist revolution in 1949 set the stage, Chen says. The Korean War, the Taiwan Strait crises, and the Vietnam War--all of which involved China as a central actor--represented the only major "hot" conflicts during the Cold War period, making East Asia the main battlefield of the Cold War, while creating conditions to prevent the two superpowers from engaging in a direct military

showdown. Beijing's split with Moscow and rapprochement with Washington fundamentally transformed the international balance of power, argues Chen, eventually leading to the end of the Cold War with the collapse of the Soviet Empire and the decline of international communism. Based on sources that include recently declassified Chinese documents, the book offers pathbreaking insights into the course and outcome of the Cold War.

The mid-twentieth century saw the birth of popular occultism in Europe and the New World, including an interest in witchcraft. Chief among these was Wicca, a recension of ceremonial magic and nature worship

advanced by Gerald Gardner and Alex Sanders, now widely regarded as a religion. However, lesser-known streams of the witch-current thrived the shadows, having older historical roots, and linked to a body of practice - witch-bottles, knotted cord spells, curses, exorcisms, sexual magic, and charms ranging from the conjuration of angels to protection for livestock and hearth. This is Traditional Witchcraft, whose origin in part lies with the sorcery of the cunning-folk of Britain and Colonial America. Eschewing the popular occult limelight, its perpetuation as a mystery-cult continues as a largely closed group of initiates. Now revised and expanded, the second edition of CHILDREN OF CAIN is the definitive history of Traditional Witchcraft and its key operatives in Britain

and the United States, and is based on over forty years of research and private collaboration with practitioners of this mysterious form of folk magic.

Environmental Physics Third Edition - Sustainable Energy and Climate Change Egbert Boeker & Rienk van Grondelle, VU University Amsterdam, Netherlands Environmental Physics, Third Edition serves as an introduction

to physics in the context of societal problems such as energy supply, pollution, climate change and finite resources of fossil fuels and uranium. The emphasis of this text is on physics, i.e. the concepts and principles that help in understanding the ways to produce energy efficiently or to mitigate climate change. Extra attention is given to photosynthesis due to its importance in the field of renewable energy. This thoroughly revised and updated third edition focuses on the utilization of sustainable energy and mitigating climate change. The text explains the physical mechanisms behind climate change and discusses the physics of renewable energy options. Nuclear

power is treated in a separate chapter because of its social and political importance. In the final chapter political and social aspects of 'renewable energy and climate change' are reviewed. A distinguishing feature of the text is the discussion of spectroscopy and spectroscopic methods, again from basic concepts, as a crucial means to quantitatively analyze and monitor the condition of the environment, the factors determining climate change and all aspects of energy conversion. This textbook will be invaluable to students in physics and related subjects such as physical chemistry and geophysics. It assumes a basic knowledge in physics and mathematics, and all equations are

derived from first principles and explained in a physical way. Supplementary material including sections from earlier editions of this book, a description of environmental experiments for a student's labs and computer codes to expand some of the books' content are available from www.few.vu.nl/environmentalphysics

Sustainability has a major part to play in the global challenge of continued development of regions, countries, and continents all around the World and biological nitrogen fixation has a key role in this process. This volume begins with chapters specifically addressing crops of major global importance, such as soybeans, rice, and sugar cane. It continues with a second important focus, agroforestry, and describes the use and promise of both legume trees with their rhizobial symbionts and other nitrogen-fixing trees with their actinorhizal colonization. An overarching theme of all chapters is the interaction of the plants and trees with

microbes and this theme allows other aspects of soil microbiology, such as interactions with arbuscular mycorrhizal fungi and the impact of soil-stress factors on biological nitrogen fixation, to be addressed. Furthermore, a link to basic science occurs through the inclusion of chapters describing the biogeochemically important nitrogen cycle and its key relationships among nitrogen fixation, nitrification, and denitrification. The volume then provides an up-to-date view of the production of microbial inocula, especially those for legume crops.

Hands-On Social Studies for Ontario, Grade 4 Holt McDougal Mathematics Provides authoritative guidelines for the establishment or improvement of national programmes for poison control. Addressed to policy-makers and the administrators of specialized facilities, the book responds to the need for

comprehensive advice on the most rationale and effective ways to manage the greatly increased number of poisoned patients seen throughout the world. Strategies for the prevention of poisoning are also described. The guidelines draw on the practical experiences of numerous well-established poison centres in different parts of the world. Although recommended lines of action have universal relevance, the book gives particular attention to the situation in developing countries, where a basic infrastructure for the care of poisoned patients is often absent and special problems arise from the lack of adequate communications,

transportation, drugs, and support services. Throughout, emphasis is placed on the role and functions of a poison information centre as a crucial component of any national programme for poison control. The book has nine chapters presented in two parts. Part one provides an overview of the policy issues surrounding decisions to introduce measures, including specialized facilities, for the prevention and management of poisoning. Arguing that a poison information centre should be available in every country, part one also describes the benefits of such centres, outlines their principal functions, and suggests various options for their logical and cost-effective

operation. Against this background, part two provides detailed technical advice on how to organize and operate the various facilities and services that make up a comprehensive system for poison control. Separate chapters describe the functions and requirements of information services, clinical services, and analytical toxicological and other laboratory services, and discuss the importance of toxicovigilance as a strategy for prevention. Subsequent chapters explain how to deal with major emergencies involving toxic chemicals, and outline solutions to the problem, encountered in most developing countries, of obtaining essential antidotes. Part two concludes with

advice on the design and content of forms for collecting, storing, and reporting data, followed by a detailed list of the main literature required in a poisons information centre. Additional practical information is provided in a series of annexes, which describe a computer software system for the management of poisons data, reproduce several model record and reporting forms, and classify a large number of antidotes and related agents according to their proven effectiveness and urgency of availability. ..". For those involved in improving safety, this book is a bible... It is very difficult to be critical of this outstanding work ... an essential reference for all those involved in the

use and handling of chemicals. For regulators and those concerned with government policy issues, it should be compulsory reading..." - Chemistry and Industry

Numbering the Dead is a seminal account of the violent civil conflict that broke out around the city of Pietermaritzburg in 1987 and what ensued over the next three years. Aitchison and his colleagues, based at the Centre for Adult Education, documented and dissected the ebb and flow and the changing circumstances of this not-so-low intensity civil

Borden's caption reads: "World War I War Leader, 1914-1918," and King's caption is similar: "World War II War Leader, 1939-1945." No other dates are given. Defining Borden by his wartime leadership makes sense, since he did little of note before the war, but it does not ring true for King, Canada's longest-serving prime minister. Yet for both, world wars shaped their careers and legacies. Yet for both, world wars shaped their careers and legacies. They ushered in massive government changes: income tax, health

care, and conscription; changes to society through industrialization, enfranchisement, and patriotic unpaid labour; and they raised enormous armed forces from a civilian base. " Warlords " is a fast-paced narrative that humanizes the war effort through the eyes of these prime ministers. By creating this unique double portrait, the multiple-award-winning Tim Cook describes the challenges faced by two politicians in extreme circumstances and offers an invaluable perspective of war and war leaders.
