An introduction to the engineering principles of embedded systems, with a focus on modeling, design, and analysis of cyber-physical systems. The most visible use of computers and software is processing information for human consumption. The vast majority of computers in use, however, are much less visible. They run the engine, brakes, seatbelts, airbag, and audio system in your car. They digitally encode your voice and construct a radio signal to send it from your cell phone to a base station. They command robots on a factory floor, power generation in a power plant, processes in a chemical plant,

and traffic lights in a city. These less visible computers are called embedded systems, and the software they run is called embedded software. The principal challenges in designing and analyzing embedded systems stem from their interaction with physical processes. This book takes a cyber-physical approach to embedded systems, introducing the engineering concepts underlying embedded systems as a technology and as a subject of study. The focus is on modeling, design, and analysis of cyber-physical systems, which integrate computation, networking, and physical processes. The second edition offers two new chapters, several new exercises, and other improvements. The book can be used as a textbook at the advanced undergraduate or introductory graduate level and as a professional reference for practicing engineers and computer scientists. Readers should have some familiarity with machine structures, computer programming, basic discrete mathematics and algorithms, and signals and systems.

The first resume book from the *What Color Is Your Parachute?* career guru Richard Bolles. Resumes get an average of eight seconds of attention before going in the trash—or getting on the shortlist. That's just one of the findings reported here, as legendary career expert Richard N. Bolles presents new research about resumes in a guide that summarizes everything job-hunters and career-changers need to know about this essential tool. This timely resource features the latest research on important resume topics such as key words, soft skills, scanning software, social media, and online posting. Bolles argues that on the basis of what we now know, we need to rethink what a resume is—and how it should be written. He details the words that must be avoided, and the words that must be used, on a resume that wins you interviews. This slim volume distills a huge amount of information down to its very essence. Armed with tips and shortcuts based on the author's decades of experience, you can craft a resume and cover letter that will stand out to your dream employers—and increase your chances of getting interviews and landing jobs.

This book contains all the guidelines needed to help you write an advertisement resume that will get you interviews and a job. It promotes writing results work statements rather than task and responsibility statements. Key features include how to write 1. your heading in relation to space available, 2. targeted objectives, 3. work statements that use key words and still describe how good you are, 4. skill sections that show your level of ability, and 5. activities that show your chemistry. *Make Your Resume Talk* is written in sections to help you build or re-write your resume and help you tailor your resume to specific jobs. Many "before and after" resumes with individual critiques on different occupations are included to show how to write statements that get attention

of potential employers. Helpful tips are provided throughout the book to highlight critical information for writing a resume that will talk for you. Chapters are provided to cover all aspects of the resume plus special chapters on electronic resumes, help for high school/college students, and the physical attributes of resumes. Effective cover letter guidelines with examples are provided as a bonus. Personal testimonials are scattered through the book to show you how the guidelines helped other users. The success of his approach is shown by this quote from a Senior Corporate Recruiter from Red Hat which stated, "As a corporate recruiter, I view hundreds of resumes daily filed with buzz words, tasks and objectives that don't meet the candidate's background. These resumes are quickly eliminated. The resumes that follow the guidelines outlined in Dick Hart's book that show the depth of the candidate's ability and how well the buzz words apply to their accomplishments are the ones we seriously consider. Diligent applicants need to follow his advice and list solid achievements from past/current performance."
